Thread: [Get notifications on your computer, security, and mirror your phone on your computer](#)

EthanX - November 4, 2016, 11:01 pm

Airdroid

Found this amazing application. It allows you to do some fairly cool things, like send notifications to your computer when they come in. For example, you get a text and you get a pop up on your computer and a reply button so you can easily reply.

I am not paid to talk about this app, just found it and love it as it's so useful.

<https://www.airdroid.com/en/>

Works on mac and windows.

Some of the great features i've noticed :

- View notifications/ get them live on your computer
- Intruder mode : when screen lock is failed, a picture of the person is sent to you
- Built in anti-virus
- Built in device manager (Locate,Sound,Lock)
- Manage and remove apps quickly within application
- Record screen from the app
- Back up phone using app
- Transfer files too or from device to computer
- Air mirror (basically like teamviewer on your device, control phone with computer, needs root to work well, can be done without root on some devices)
- Probably more, things are added all the time.
