[img]http://img175.imageshack.us/img175/6871/crypt2.jpg[/img]

Twinkle Crypter make by Chr|s, i modded its stub undetected and am re-releasing it. Not much to say but modding can be a hard task so please give thanks, and enjoy. More quality posts will follow.. ?

PS: I will be providing updates on this stub!

Remember to register the ocx's in the OCX folder if you run into any problems.

-mothered- - July 16, 2010, 3:31 am

I like the broad range of Antis, but I would've liked to see Anti-Kaspersky Inclusive.

Nonetheless, It's not too bad at all. My Norton's Sonar protection ceased the execution, hence further analysis is pending.

onisystem - July 16, 2010, 6:16 am

Yo this guy is fucking awesome

I would suck his dick if we were together.

Works %100 and is clean thanks!

drizzy_effect - July 16, 2010, 6:59 am

Not trying to flame here but uh

why is this program trying to dip into my HKLM\SOFTWARE\Microsoft\CTF\SystemShared\ folder?

Th3DON - July 16, 2010, 6:59 am

This looks good thanks for release!

Prank Calling - July 16, 2010, 7:04 am

This looks Good Im Going To Try this l8r.

Sia - July 16, 2010, 7:20 am

(Jul 16, 2010 06:59 AM)drizzy_effect Wrote: [\[CITE\]](#) Not trying to flame here but uh

short
short
shorts

Doggie! - July 16, 2010, 7:30 am

little tip before running this...just put the master password on firefox that way you can protect yourself...if you have any other apps then i can't help you...anyway this corrupted iStealer 6.3 and

CyberGate 1.7.5 RAT ...so it doesnt work for me...

V3xD - July 16, 2010, 9:16 am

Works fine for me on latest CyberGate 1.7.5, also i love noobs who say its infected without analyze, completely clean.. :D

V3xD - July 25, 2010, 7:05 am

Re-Modded!

Enjoy! Post thanks if you like my mod. Will continue updates, Runtime UD!

V3xD - July 25, 2010, 8:19 am

had to bump for update !! downloads but no reply?

Himself - July 25, 2010, 9:08 am

hmm i cant change icon of crypted file

V3xD - July 25, 2010, 9:19 am

Yep i noticed that too, any simple icon changer will add an icon to it, use the search button.

I hope your using the update. :P

Himself - July 25, 2010, 9:53 am

well i used mini icon changer,and res hacker,and still i cant change it,any suggestion?

Simba™ - July 25, 2010, 9:57 am

Wow, this one is very good! And the password length is really long.

exlan - July 25, 2010, 10:04 am

Is this used for the crypting rats? Like i have followed a tutorial on how to make a rat, and at the ending it says now you only need to crypt your rat and your done.

Thx :)

Site link btw: <http://twinkle-crypt.6x.to/>

Himself - July 25, 2010, 10:13 am

yeah its nice, works nice with Cybergate, but damn i cant change that icon, V3xD can you implement changing icon into crypter?

exlan - July 25, 2010, 10:14 am

When i crypt my rat/server.exe people can't open it? Why crypt?

V3xD - July 25, 2010, 10:38 am

Ok i just threw 2gether how to change icon, tested and worked but its kinda sloppy lol.

download this: <https://hackforums.net/showthread.php?tid=484482&highlight=icon+changer>

use that to change the icon like normal, although i found it didnt actually change it.

Well after it supposedly changes it, open the crypted file with ResHacker.

Click the + next to Icon Group, then open 1 also.

Inside there, theres 2 different resources for 2 different icons. 1 Will be the icon you want, one is the old one. Right click on the old one and goto delete resource.

File > Save

Complete! comments?

exlan - July 25, 2010, 10:40 am

Explain me this please? When i crypt my rat/server.exe people can't open it? Why crypt? :)

V3xD - July 25, 2010, 10:41 am

(Jul 25, 2010 10:40 AM)exlan Wrote: [\[CITE\]](#) Explain me this please? When i crypt my rat/server.exe people can't open it? Why crypt? :)

You are obviously doing it wrong, the crypter works fine. The server.exe must be broken before crypting. Crypting would make the file undetectable.

exlan - July 25, 2010, 10:44 am

I don't know if the victim can open it or not.. I maked my rat in the Cybergate program. Now i should open it in Twinkle Crypter, set the encryption key on the longest and press on all the antivirus stuff and then save?

Broken?

V3xD - July 25, 2010, 10:45 am

<https://hackforums.net/showthread.php?tid=302087&highlight=icon+changer>

This icon changer changed its icon easily with no errors!!

exlan - July 25, 2010, 10:46 am

Ignoring me or something :p?

V3xD - July 25, 2010, 10:47 am

exlan download vm ware for all your virus testing needs

exlan - July 25, 2010, 10:50 am

I'm just asking you to tell me some basics :) Please answer my questions :D

I don't know if the victim can open it or not.. I maked my rat in the Cybergate program. Now i should open it in Twinkle Crypter, set the encryption key on the longest and press on all the antivirus stuff and then save?

Server must me broken?

Valour - July 25, 2010, 10:52 am

Hm..

I am going to check it out no matter if its not FUD..

Thanks for this as you have put your hard work into modding (might be it is called hexing but I don't know ?)

bth - July 25, 2010, 10:53 am

This this thing can make stuff undetectable, why didn't you just crypt it with itself?

V3xD - July 25, 2010, 10:55 am

lol bth thats not how it works ..

exlan that is correct, yes thats how you crypt it. If the server breaks then its your own fail.

exlan - July 25, 2010, 11:01 am

What do you mean in the erlier post: The server.exe must be broken before crypting? How to brake it? Explain...

Server breaks it's my fail? Explan..

V3xD - July 25, 2010, 11:04 am

Goto school please this isn't rocket science.

exlan - July 25, 2010, 11:05 am

I'm just a fucking naab :p Why can't you just answer my questions and help me?

Himself - July 25, 2010, 11:32 am

Thanks for link to that icon changer,btw V3xD your crypter is one of thoose that aren't detected on start by nod32 or Windows Defender so its rly usefull for me ;) Now its time for spreading(boring part bleh)

exlan - July 25, 2010, 12:13 pm

Thx V3xD! WORKS VERY GOOD! :D

V3xD - July 26, 2010, 9:02 pm

Still good UD rate so no remod needed if there are any more detections please reply and let me know.

If you guys havent seen the stub update post, click here, still 1/16:

<https://hackforums.net/showthread.php?tid=545503&pid=5373185#pid5373185>

(Aug 11, 2010 05:01 AM)abdl098 Wrote: [\[CITE\]](#) error wont open i dont know why
run in windows XP, run as admin, install the framework it requires and restart comp, retry then it works?

V3xD - August 11, 2010, 8:44 am

Go in the OCX folder included in the .rar, register the ocx's with the registrator. (codejock/etc.)

spike2147 - August 11, 2010, 10:01 am

Research information:

Works with cybergate

Works with Blackshades

**Does not work with iStealer

Cybergate stability: Low. ?????

Windows XP: works fine

Windows Vista: Warning while opened for Admin privileges

Win7 x86: Server crash at startup

Win7 X64: Server crash at startup and no reconnect.

used server: cybergate

can u please update the stability? thanks.

V3xD - August 11, 2010, 11:11 am

I appreciate you taking the time to rate my mod, but it has good stability, and is working on Windows 7 64 and 86.. it must be your server or vm.

Just tested Cerberus server working on Win7 64 with this crypter.

[img]<http://img193.imageshack.us/img193/803/watom.jpg>[img]

Hattrickgamer - August 11, 2010, 11:35 am

[img]http://img193.imageshack.us/img193/803/watom.jpg[/img]
it does work, but on some of my systems it crashes at startup.. like i already said. so this crypter is build for Cerebus i used Cybergate. Explains everything.

to CATMAN:
yes it does

V3xD - August 11, 2010, 7:35 pm

(Aug 11, 2010 12:59 PM)spike2147 Wrote: [\[CITE\]](#) so this crypter is build for Cerebus i used Cybergate. Explains everything.

It tested fine for Cybergate, i doubt that this was build towards 1 trojan lol. You said somthings wrong with the startup, idk if that true its working fine for me

CATMAN, Cerberus works on Windows 7 x86 and x64 bit, and XP. Very good stability, similar options to CyberGate but the process injection works %100! Also is more stable.

T-Virus, latest version here:
<https://hackforums.net/showthread.php?tid=545503&pid=5726825#pid5726825>

The Silence - August 13, 2010, 12:18 am

Its not work with cybergate....when i send it to my victims they are infected but when they restart computer !

it pop up V3xD don send and send...and no reconnect...conection failed 46 :O

V3xD - August 13, 2010, 2:18 pm

it works bro nothings wrong with this one but if you wanna try another new mod of mine stay posted ill be making another thread today when i get finished with this 2 antiviruses.
