Is the bonus method just a regular bonus chaser?

Methods or scripts? It's all luck anyway...

All the vouches are such low amounts lol you can get that yourself in 30 seconds.

No one can guarantee an outcome. That's why if you lose \$5 on a method like this, you'll either make \$20 or so on a streak and be like "omg so good" or try it with a \$10 deposit and call it a loss if you lose.

OP - if you can guarantee a profit, how about I'll play with my own money & your method, you keep my winnings for 2 weeks in return for the method. Surely it makes more sense to make at least \$50 off me rather than \$5 no?

He won't do that because he says in the thread that it can fail.

Shouldn't really matter, he says the chance of it failing is close to 0% so statistically, he has nothing to worry about. I can even start with \$2 (that's double the recommended amount!)

Also, 0.125 = 87.91\$ - perhaps a typo?

Not a typo, he said you need 125k bits which is 0.125BTC, that's for the bonus method supposedly.

These methods work to a point but then it fails and you lose big. I have messed around with different things and they all work for a little bit and then fail. If you can show proof of it not failing, I would be interested in purchasing.

This is gambling, it's impossible to make it win 100% of the time. The method is unlikely to fail though.
