Thread: [Backdoored twice..](#)

shwb_ - November 8, 2016, 12:49 am

I've had the same site backdoored twice, once was after SEing their hosting to get the client information reset to my own, the second was by sheer bruteforcing the password (as he used a different password again, and I could not SE twice.).

Point be made, I have access yet again, dumped the database, and have uploaded a c99 shell, what else would be worth while?

SlimJimTheHunter - November 8, 2016, 4:18 am

Rm -rf system64

Upload a vb.net gui interface to trace the killers IP

Create a shrine to Ryan

I would rm -rf too

After that I would upload porn or something offensive

New to brute forcing, I have a few questions.

Did you use a dictionary?

Did you have to use a special admin login page or regular?

And what program did you use?

Thanks.
