Thread: [Binding .APK file\(RAT\) with Image file?](#)

Hobology - November 9, 2016, 7:07 am

Is it possible to RAT android phones using images?

I have seen RAT but only through installing the .apk

Is there any way like, binding the .APK file with an image? Will it work?

I think it should work because, we do bind .exe file to an image, so why not .apk! ?

When you bind anything to your RAT (.exe) it will still output as a .exe, so if you had bound a .jpeg to it, it would still show as a .exe, but open the .jpeg when you run it.

So no, your wrong.

You can bind RATs to things like APKs I believe, but why not just learn metasploit & use an exploit from there to infect an APK file? :D

YayHar - November 9, 2016, 3:12 pm

You can NOT bind an exe to an image and have the extension be .jpg or .png.

I am not familiar with infecting androids so I keep silent on that topic, but

I would rather you not go around with false information.

If you need help on anything in specific, feel free to hit me up.

Well, certainly my confusion about the binding matter is cleared now!
I was something else which I just assumed and it wasn't true. But now it's all clear.
Thank you all. ?
