I am also taking suggestions for new modules. If you bought the program and you'd like a module added, PM me with a website. Note that I've tested some websites and it does not work with the method that I am using to check these names.

Disclaimer: Some modules may show banned/reserved usernames as available. This is not my fault, this is how the service handles suspended names.

Full module list:

Minecraft

Xbox (Gamertag)

Youtube

Tumblr

Instagram

Steam

Twitter

EDIT:

I got a vouch copy and it works perfectly. It's fast except for Minecraft(Because of it's rate limit). There were a few bugs that I reported to op and he fixed them in minutes!
