Thread: [Beep Beep sound from CPU when I turn ON my computer](#)

[Rn] 7s^2 - November 14, 2016, 11:59 pm

DVI - No signal

VGA - No signal

I think there's some issue with my PCI express wireless card. A few weeks ago, my ad-hoc connection stopped working but I ignored it.

Now my PC doesn't start and this beep sound keeps playing. Please help me.

ka\$h - November 15, 2016, 12:16 am

Continuous beeps means problem with CPU

[Rn] 7s^2 - November 15, 2016, 12:49 am

It beeps, then pause for 1 second and again beep, then pause for 3 seconds, and repeat.

It doesn't stop, ever?

If your computer beeps when you turn on then head over to this site and identify the problem:

<http://www.computerhope.com/beep.htm>

EdgyRevenge - November 15, 2016, 1:08 am

Look up the manufacturers website of your motherboard I believe about the beeps. Usually when a pc beeps its a problem on the board(IE ram not seated properly, etc, etc)

I see. I'll try to record the sound if it happens again. BTW PC is working now.

reset your bios and check if your CPU is overheating

CPU is not overheating. I'll try resetting BIOS though.

capt_nemo - November 15, 2016, 9:18 am

Mainboard Model?

you can write via pm If the problem still exists
