Thread: [How to mess with my schools tech admin?](#)

**Hunter556** - November 15, 2016, 6:51 pm

I wanna know what I could make and how so I could troll my school's tech guy. I am not trying to be overly destructive.

**test** - November 15, 2016, 6:51 pm

Take a shit in his mailbox. That'll show him.

**Redwall** - November 15, 2016, 6:51 pm

Vouch for this method.

**k0dez** - November 15, 2016, 8:54 pm

Just don't do it? No reason to make the poor dudes life any harder.

**1NEsolo** - November 15, 2016, 8:57 pm

Dont listen to this guy..

Listen to that other voice thats telling you to take a shit in his mailbox.. that sounds like a plan. ?

**fapninja** - November 15, 2016, 9:00 pm

Look over his shoulder when he uses his admin password. Be prepared to remember a series of numbers.

**Gigabear** - November 15, 2016, 9:00 pm

ask if u can cuddle with a couple ethernet cables, works every time

**Sajuuk** - November 15, 2016, 11:27 pm

(Nov 15, 2016 10:00 PM)Gigabear Wrote: [\[CITE\]](#) ask if u can cuddle with a couple ethernet cables, works every time

Or he could just blow that techshit right out of his socks by spitting some programming phrases he's never even heard of before.

**Gigabear** - November 15, 2016, 11:30 pm

"hey can you help me increase the egress filter on the core routers to block the encapsulated ipv5 packets from spoofing the ttl field of the ipv3 header to create a malicious hacker packet to stop the trojans from deencapsulating thru the gbic module of the ftp probes?"

**Sajuuk** - November 15, 2016, 11:37 pm

the ftp probes?"

More or less, that. Let me enhance your understanding of the art of bullshitting programming phrases:

"Hi I'm here to reroute the web servers. I specialize in RTC obstruction mending and have over three years of hands on experience with OCaml and GoLang. My main access system has to be plugged into a PC with administrator privileges, meaning I'm going to have to use your computer to open port access so I can edit the hex values and force a C-style typecast onto the JSR library. Soon as all that finishes, the school internet should be up and running again."

See, the key is to use long, complex words. Even so far as to purposely extend the last syllables of the word to convey seriousness (in a sense).

**TheQuist** - November 18, 2016, 11:07 am

How about this, this is how i'd call a VirtualMachine: digitalized information processing units. DIPU. Sounds good to me.

**Sajuuk** - November 18, 2016, 12:11 pm

**DaRk LoRd FIaRe** - November 18, 2016, 6:56 pm

don't unless u want to get expelles

**Brotherhood.** - November 19, 2016, 3:10 pm

Probably not worth it if youre wanting to cause damage

**Inked ?Feather** - November 19, 2016, 3:14 pm

ask him for a tin of tartan paint

annoys em everytime

This may be overly destructive. Perhaps on his doorstep?

I could hear the sound of power going off from the tech guy's head
