Thread: [Private VPN Setup \(OpenVPN & L2TP/IPSec\) \[\\$2\]](#)

Decorous - November 17, 2016, 8:31 pm

This is the right thread for you if you need a private VPN.

You might need a DDoS protected VPN or you are just sick of the slow shared VPN's.

All you need is a VPS (read below if you don't have one) and I'll do the rest and manage it for you.

You can have as many accounts as you want, so you can give access to your family and friends.

Available VPN Protocols:OpenVPN.
L2TP/IPSec.

Features:Full Access (you own the VPS!).

Up-to-date OpenVPN.

No Logs.

Encryption (4096 bits RSA).

Secure.

No DNS Leak.

DDoS Protection.

Works on any Device/Operating System.

...

Price:\$2 (BTC only).

I can install the VPN on any operating system, but I prefer Debian.

If you don't have a VPS I can recommend few good and affordable providers, it's going to cost you around \$1 to \$5 per month (depends on the location, bandwidth, DDoS protection, ...).

Send me a private message or add me

Skype (Send me a private message)

XMPP Decorous@xmpp.is

* I'm giving two members access to a US VPN (OpenVPN) for 10 days or setting up 1 VPS for each member.
