Thread: [\[Tutorial\] How to use Dualshock4 on PC](#)

Lufasu - November 18, 2016, 5:28 am

First you download the software DS4Tool (current version 1.4.52)

Can be found here - <http://ds4windows.com/> (thanks to Minato Namikaze for the note)

Before using the software, you must install several devices to your computer

The driver of the signs of Xbox

If you experience problems, we recommend installing the following software:

Microsoft .NET Framework 4.0

Microsoft Visual C 2010 (or 2012) Runtime

Latest DirectX Runtime

(Do not post download links)

After downloading the DS4Tool, open the file and extracts the folder where all separate.

Now you enter the Virtual Bus Driver> SCPDriver.exe, make sure that you run the program as an administrator!

On the app, click install, it should take a second application should be completed in the install succeeded even if it fails, so check in log all transactions resulted in success and in Error

If you get errors, and you have opened as administrator

Remote connection to your computer.

This is the stage where you connect the remote to your computer, you can use the cable that came with the PS or use bluetooth

When you connect the cable to your computer you should perform the installation of the driver of the sign

To connect remote bluetooth in your PC needs to support (Bluetooth 2.1 and EDR (Enhanced Data Rate))

First of all it voodoo remote and the PS are off, hold down the PS button and the share button on the remote control until the LED starts flashing.

At this point, you must "pair" from the remote computer

Enter the Control Panel> Devices and Printers> Add Device

Running the software:

Return back to the folder it came to scpdriver and now run the ScpServer.exe, this app is the remote control buttons of the Xbox

If you did everything correctly, the software should show the following:

Another nice option that can be done is to change the color of the LED on the remote

Press the button settings (options) and on the top right, you can play with colors

I hope i helped you guys , if you have any errors , just PM me i'll help you out :)

for me -

Fifa

need for speed

dragon ball xenoverse 1/2

oudini - November 19, 2016, 1:51 pm

Xpadder also is Very good

Nasal - November 19, 2016, 1:52 pm

This is so sick man, thanks a lot! All games on PC are way cheaper

Minato Namikaze - November 19, 2016, 1:55 pm

I use DS4 for windows aswell.

But that is a veryyyyyyy old version of it. Current is actually 1.4.52 not 1.22

Here is the official changelog w/ download to newest version.

https://docs.google.com/document/d/1l4xcgVQkGUskc5CQ0p069yW22Cd5WAH_yE3Fz2hXo0E/edit

You can add it to your op if you want :)

I have the old one since i dont really update the program because i play only 1-2 games on PC with my ds.

but i'll note that one :)
