Thread: [MITM Session](#)

Solar_Flare - November 18, 2016, 9:48 am

Okay, Imagine this.

I have a MITM session active and people are connected. How can I replace their "Banner ads" with mine. In other words, I want my banner ad to be shown. ?

Would this be cookie hijacking? Where on HF can I find out how to do this?

Thanks

I've never done that specifically but I have used ettercap to DNS spoof.

You can make google.com redirect to pornhub.com etc that might be fun

yes definitely fun!

Im looking to promote my affiliate links my biz and possibly spread propaganda ?

I am also very interested in this. I remember on some android app i was using dsplot or something you could swap images.

So I guess it's not difficult.

Any insight or Intel would be great! Wha ha ha !!

Thanks

Solar_Flare - November 19, 2016, 11:53 am

anyone on this level of intel? You know, Control the network, control banner ads and propaganda..

???????
