Thread: [How To Successfully Spread Your RAT/Botnet/Keylogger!](#)

jekankerslet - November 19, 2016, 12:31 pm

Method 1...

MySpace

1. Sign up at Myspace.com
2. Make a sexy name.. like Christina Johnsson..
3. And When you are done.. Change the profile picture to some sexy bimbo chick.
4. As Profile Info.. Write that you are single and that you are modelling.. etc. etc. and soon enough people will add you. (Hopefully Guys :P).
5. Tell them that you have made a portfolio and you want them to try it out. Send your RAT/Bot/Keylogger server to them... Make sure they runs it.. and there you go, A Victim... now do this to many peoples and you will get many victims =) !

Method 2...

Chatrooms

1. Google This: "Teen Chatroom"... Or anything Similiar.
2. Name your name to some sexy chick name.
3. Enter A Chatroom And Tell Them You Want To Show Some Webcam.
4. Tell them your E-Mail Adress.. Add Them.
5. Now, Tell them that they have to Run your Webcam Patch... Wich ofcourse is fake .. (Your Server.. Hopefully Crypted with an Webcam Icon).. They'll be like.. Sure.. now.. You got them on your Botnet list/ RAT.. whatever :D!..

(Nov 19, 2016 02:03 PM)jekankerslet Wrote: [\[CITE\]](#) Yes, what is your problem? I keep getting this message each time i open my nano core "There is a high number of failed connection attempts to NanoCorewhich indicates external software may be using the port, this could have a negative impact on performance and stability."

and i dont see logs when i browse the logs of my slaves, even on password recovery, they all open blank..

something is using the same port as the one your listening on in nano core.
either change your port that's listening or look for what else is using the port.
torrent client ect.

great post op x) enjoyed reading this hahah

skelly76 - November 29, 2016, 6:29 pm

This is a pretty bad spreading method, many better ones out there. You put in way too much work

here for every slave.
