-This can be used to get back your account...

Important:

You need to have security or "validate number" from victims account, this will work only if victim returnet profile and than u use security code to enter profile, so, you need to go back and find that security code!

Step1: You must remember the last password you used for that account, so, enter victims email that she/he used to log in, facebook will said "Please re-enter your password

The password you entered is incorrect. Please try again (make sure your caps lock is off)."

Enter that password again and you will get this:

manndi - July 21, 2010, 6:02 am

if you have acess to thelogin email just make a password reset

metonk ajjah - July 21, 2010, 6:40 am

This is nice tut 4 recovery when account is hacked by someone..

Zero_Code™ - July 21, 2010, 6:55 am

yeah,but lol,u dont need access,u just need reset code,so if u put some where reset code for account or if u use reset code one time after your account gets hacked you can now use it to recover account,because person who hack account change password just one time,now you enter you last password,than if u have enter code and your profile is again yours :))
