Thread: [Looking For Skilled Python Developer USING MAC OSX](#)

evilpanda - November 20, 2016, 11:00 am

So basically as said in the title. I'm currently in the process of writing a pretty cool python script for a Mac OSX hack. And am looking for someone to help out.

If you want to help its a requirement that you are using a Mac OSX laptop preferably running the latest OS. I will send more details on skype.

Post your skypes in the chat and i'll add up.

You shouldn't limit this to OSX devs. Python is very usable cross-platform.

Yes indeed it is but the exploit/hack i'm developing is focused for a mac victim. Therefore the possession of a mac computer is essential.

This seems more like a partnership request than an open invitation to help. The Programming, Coding, and Languages forum is for discussion regarding actual code and programming practices. This is a request for help and belongs in the Partnerships and Hiring Personnel section here: [Jobs and Partnerships](#)
