Thread: [Doxing Tips](#)

Scarface™ - November 23, 2016, 6:35 pm

Accursed here, with some Doxing Tips for beginning doxers! Enjoy

A example of a dox template I made (Put IP and IP info if needed):

MAIN TITLE or NAME OF THE SK1D xD

=====

=====

Reason For Dox:

=====

=====

Basic Information

Alias:

Full Name:

Address:

City:

State:

Country:

ZIP:

Phone Number:

Age:

Email:

Picture:

=====

=====

Social Media

Skype:

Facebook:

Youtube:

Twitch:

Insta:

Twitter:

Site(s):

=====

=====

Parents, Other Family & Friends

Father's Name:

Photo:

Address:

Phone Number:

Email:

Work:

Mother's Name:

Photo:

Address:

Phone Number:

Email:

Work:

=====

=====

Other embarrassing or mandatory info:

=====

=====

Here are some tips and tools!

- Kind of need to know the person (sometime)
- Pastebin.com (makes it more organized)
- Yellowpages.com (or some sort of name identifiers/address finder)
- Maybe a extra friend (for more help)
- Confidence
- VPN (so you don't get tracked..)
- IP Sniffer
- IP2Skype
- Geolocate the IP

STEPS:

1: What you should do is try to get the persons name.

2: Once you have done that use your ip sniffer or command and get the ip of said person.

3: Once you have the IP use a geolocator and find where the ip is, state and such. It will ALL be documented in the dox.

4: Now with the persons name try to look them up on yellowpages.com or ancestry (it worked o.o) and try to verify the age and parents of this person, maybe ask them.

5: Once you've achieved to this part you will now have their IP and name and parents name hopefully, now try to find what social media they are on and find a picture.

6: Everything you find on this person will be documented in the dox so have it in your sticky notes.

7: If you go real hard try to get credit card info, address (easy), SSN, social media accounts, go ahead, but thats a whole new tutorial!

HAVE FUN DOXING!

Quote:1: What you should do is try to get the persons name.

I appreciate the drive to help the community, but try to go more in depth as it may help more people in the long wrong.

Don't stop! Continue to help the community grow! Good luck

Thanks so much man, have a good one. ?

JustAKiddie - November 23, 2016, 8:18 pm

Nice job man, very useful.

G Eazy - November 23, 2016, 8:42 pm

Nice post man this well help a lot of people out.

Appreciate it. ?

Luciferum - November 23, 2016, 9:06 pm

Good effort, but a more detailed tutorial would be a bit better in the future.

And this also belongs in the Private Investigation section, good effort.

Recommend any certain IP sniffers and geolocators? I'm completely new with no background and no friends into this, so I don't know what is good and what isn't.

In time you will learn. There's no certain IP sniffer or geolocators that come to mind. For like computer softwares, I suppose you can use Cain and Able or Wire Shark. Or use Skype2IP on websites. Pretty solid ways.

Garbage post filled with ancient knowledge. We don't need any more shitty "doxing" guides which boils down to using search engines, or any doxing guides at all.

NoneStar - November 24, 2016, 12:57 pm

Nice work man. But shouldn't this be in the Private Investigation Methods and Anonymity section instead?

[OpSec and OSINT](#)

I mean, if you say so man. Have a good one.

I noticed this, the new one will be corrected a lot and posted on that section. Thanks for the heads up. ?

booger99 - November 24, 2016, 6:33 pm

Thanks for the tutorial op I'll try these tips out
