Thread: [\[TUT+KIT\] E-Whoring Setup TuT + Webcam Video Pack](#)

Syntic - July 17, 2010, 5:34 am

Hi,

Just joined this forum and thought I'd contribute ?

I made this pack for trolling on omegle and chatroulette but it can also easily be used as a whoring pack.

Works really great for me but it takes some skill to handle, timing mostly.

The Videos are low quality and laggy but that's exactly what makes it so effective because the transitions aren't too obvious.

Instructions:

You will need:

-ManyCam: You probably have that already. If not dl it and install it. It creates a webcam and is an essential tool !

Download: <http://download.manycam.com/>

-VLC Player: Simple Video Player, you can use others but I cannot guarantee the same Effect

Download: <http://www.videolan.org/vlc/download-windows.html>

-Vid Pack: This is where the fun comes in: 11 extremely low framerate videos! Almost all can be connected with other to create the perfect illusion. This pack was edited by me (took me a night ...)
The download is called The Troll because I used it for trolling before ?

Download: <http://www.mediafire.com/?y6c4v2bdyv5u4r5> (Removed Adf.ly for everyone's pleasure ?)

Mirror: <http://www.multiupload.com/S0O97Q32VY> (RS,MU,FS,etc.)

Content:

-Static 1

-From S1 Boobs Back To S1

-From S1 Ass To S2

-From S1 BAB Back To S1 (BAB=Boobs-Ass-Boobs)

-Complete S1 to S2

-Static 2

-From S2 Pussy back to S1orS2

-From S2 Pussy back to S2orS3

-Static 3

-From S3 Talking to a Friend to S4

-Static 4

Optional: Hypercam: For recording reaction etc.

Setup:

[IMG][http://i32.\[censored\].com/14bqjy9.jpg](http://i32.[censored].com/14bqjy9.jpg)[/IMG]

This is my setup when im using it.

VLC:

First start your video then go to Tools>Preferences>Subtitles&On Screen Display Settings>UNCHECK Show media title>Apply

Go to video menu and check "always on top" so no window can overlap it ! (Thanks for addition [EcKo](#))

Then closes Preferences. View>Playlist. Now you see your playlist. Position it next to your video.

Next click on Video>Zoom>And set it to HALF

Go to the bottom of your playlist and click the 3rd button twice to loop all vids in the playlist.

Many Cam:

Start it up then go to Effects>Text over Video>UNCHECK display manycam logo

Then go to Sources>Desktop>Custom Desktop and position that area over your video

(Ive tried using Sources>Movies but it cant read the format.)

Now connect to Chatroulette/Omgle. AT ALL TIMES care that you dont get anything over your video.

Now your all set.

Video Sequences:

Ive cut it up into different pieces to make it flexible.

REMEMBER: Statics are generic sitting around vids and can ALWAYS be looped! ALL other vids are single actions and should be used as transitions between Statics.

When I begin I have "Static 4" in my playlist. When the need comes up i drag "From S1 Boobs Back To S1" into the list and just let the static run out. It will jump to the next video in the playlist. After it is finished i go to Static 1 which I also drag into the list from my folder. When I am playing Static 1 I delete the 2 other so it loops again.

The sequence I use most is

- Static 4
- From S1 Boobs Back To S1
- Static 1
- From S1 Ass To S2
- Static 2
- From S2 Pussy back to S2orS3
- Static 3

Here is the original order of the video:

- Static 1
- Complete S1 to S2

- Static 2
- From S2 Pussy back to S2orS3
- Static 3
- From S3 Talking to a Friend to S4
- Static 4

Here are some of my trolling results ;D havent done any Ewhoring yet ...

For people having trouble with the "black Screen" what you have to do is scroll over where it shows your webcam and switch it from your webcam to many cam, this is in chatroulette or omegle

I got 1 guy and he said for me to stick my tongue out and I just started lmao cuz he musta had experience!

You can make a playlist within the same software and dynamically change the videos.. so no need for the VLC player now

Please can you shut the beep up about the homesite? Even if it's from the homesite it's still flagged trojan during the install. (YES the EXE/install/setup file that you get from their own homepage)

Now, please beep it.

Instead try to tell me why there is a trojan with the install?:)?

What's up with the link to the video files? I click it and it brings me to sketchy sites that aren't mediafire. I need my dose of trolling, its been too long

Try unplugging it when your using Manycam,

Frohe - November 16, 2010, 2:46 pm

Very nice, should use some more detailed writing though:)? for the sucky readers, like myself.

otherwise! very nice.

slofaca - November 17, 2010, 12:13 am

but if i turn my webcam off he wont be able to video call me @MSN

I should recognize ManyCam as your camera source if you dont have the other one connected.

slofaca - November 17, 2010, 4:44 am

Thanks man it works, now im on to making some money :)

omgitsmogo - November 17, 2010, 3:54 pm

When I do the "custom desktop" and position it over VLC I just see a black screen even though the video is playing. Thoughts?

Hmm several people had this problem IDK might be a software error of ur GPU but im not sure

omgitsmogo - November 18, 2010, 7:11 am

Gah this sucks . And i tried converting to .avi and manycam still wont play them??

SIM-341126 - January 2, 2011, 7:08 pm

for some reason when i put the area over it , it just shows up as black ,
i need these as avi or mpg is someone can upload or PM me!

#Drake - January 2, 2011, 7:40 pm

thing I try all kinda copy paste and shit but NOOOO I can get the player from ownload . com ok ...
but how do I dl the flv andsets?

alphawolf06 - February 8, 2014, 6:15 pm

looking pretty good thanks a lot of this detailed how-to E-whore cheers mate

Areast - June 22, 2014, 7:56 am

The MediaFire link is deleted and the Multiupload link takes me to ilivid. Could you fix this for us
please? Thanks! >.<

99PP - September 10, 2014, 2:01 pm

Yes, it is broken, as he says ^^ help us out my friends.

Makino - October 10, 2014, 1:46 pm

Fuck. The mirror is trying to have me download an iLivid download manager and I see no way to download the actual file. The original is deleted.

TGK2 - January 4, 2015, 7:11 am
