Thread: [Computer got low FPS..](#)

Shoto - November 29, 2016, 9:06 am

(BEFORE READING THIS IM NOT GOOD AT ENGLISH I HOPE YOU UNDERSTAND IT.)

Hey, First my computer was great!

I dont know what I did or how I did it but I rebooted rong (I Think).

Because I had a RAT on my computer.

I dont know if im got drivers...

Im not having much knowledge of computers.

Hope someone can help me...

CPU name: AMD Phenom II X6 1090T

GPU name: NVIDIA GeForce GTX 750 Ti

Mainboard manufacturer: MSI

Mainboard model: 890GXM-G65 (MS-7642)

Mainboard Chipset: AMD 890GX

Hope this enough??

?? Help please ?? uhm... I really need help :(

If you previously had a RAT on the computer. I would have completely reinstalled the operating system just to make sure there was nothing was missed or left behind still. Then make sure you download the correct GPU/Motherboard drivers from the respectable manufacturers websites. Here is a good video on how to do a clean installation of Windows, you'll need to make a bootable USB with a second computer and then boot into the USB on the previously infected computer.

When you say you rebooted do you mean you just restarted the machine OR you reinstalled the operating system, fresh install?

If you did a fresh install then chances are it's a driver issue, double check you have the latest drivers for your GPU
