Great work you did there, congratz ?

Keep in mind that this is a honest review based on my opinion. I am someone who used many and multiple kinds of Macro-Builders on my time on HF, so I know when I am dealing with quality and when I am not.

Let me tell you, this tool has great potential.

It was as simple as putting in a link in the tool, my serial, and clickin' the generate button. The output file executed the .exe flawlessly. It executed without delay and without any kind of error.

Ofcourse a good macrobuilder should be undetected aswell.

This product is still in its early versions I suppose, but it is perfect to infect people. It is complete FUD, and executes perfectly.

Some things OP might add in the future if he wants to:

- Custom image before enabling content
- Custom text after enabling content
- Automaticly removing the file after execution

I would recommend this tool to anyone who is looking for quality, and it is already easily worth the

money. I am sure that Vox will take good care of this and he seems like a friendly guy aswell.

I hope you sell a lot OP, you deliver a good product and thus should be threatened well!

I am sure you'll sell a lot :)

(Dec 1, 2016 10:22 AM)Frankey Wrote: [CITE](#) I received an unexpected Vouch copy yesterday and I did some basic tests with the tool.

First, this tool WORKS! And is AMAZINGLY EASY to use! I only needed to enter my serial code and a (direct) link for my executed file in the program, after that I just pressed GENERATE and I was ready to go!

But do not forget, it is fully UNDETECTED! (Here are four virus scans from all four the exploits!)

Generated Office files are

- FUD
- Works on every Office and Windows
- Macro do not use PowerShell
- Are fresh
- No Zone Id
- Editable

VBS and JS files are silent.

Every file except VBS is sendable via gmail!

The price is 18.99\$ for lifetime license and updates included!

I will sell only 25 licenses per month.

Every license is hardware id locked.

After purchase you will receive mail with serial code and download link

ToS: Spoiler [\(Click to View\)](#)

1. You can do anything with this software, responsibility is in your hands.
2. Main goal of creating this software was a create a tool which allows you to transfer your .exe (or any other ext) file without limitation over internet. Please keep that purpose!
3. Antiviruses may recognize converted files as potential malware and blocking it. Never use this builder for malicious purposes, it will affect to whole community and your serial code!
4. Payment is handled by payment proxy and whole process is automated. My assistance is not required.
5. Refunding is only possible when you never generate any file. This info is stored in database. Do not try to trick.
6. Never send generated files to 3rd persons. This is forbidden. Violating will result ban.
7. Files are updated few times in a week. There is no need to announce it.
8. Your serial code will work forever.
9. I may change Terms at any time

Wow! Tbh this looks like the best Office builder at the moment for this price. I'll buy when I see some vouches.

?Vox Populi - November 30, 2016, 1:39 pm

The price in software like this is "firewall". If software is mass spreaded then detection becomes very fast. One of factor of this is too low price. I think that user will need stable and fud software. I just made little price off to make my builder attractive. Waiting for Ubers, vouch copies left

Looks very promising.

As someone who used almost all macro builders @HF, I'd love to try yours out.

I am not Ub3r, however I am approved for ub3r (and I'll probably buy it soon anyway), but I'd understand if you would choose a more repped (ub3r) member.

It looks very promising and I hope it turns out a good project.

Good luck op!

You are mistaken. You need trusted GMail account to bypass auto-spam your mail. Trusted I mean with history.

Besides, I can add event handler for image, so when user will click onto embedded pic, it will execute code. This is not a problem

Everyone please make sure that you have using latest (1.205) version of builder. In case of mismatch, please just redownload builder

skilshotz - December 6, 2016, 2:07 am

I got a vouch copy of this product and here are the things that I think you would like to know before buying.

1. I tested this few days after he sent me a vouch copy and it was still FUD. So I'm pretty sure he is updating it very well right now.

<https://scan.majyx.net/scans/result/28ff3a7e58a5f1ff6fecc0ccddd036ad1f3d26d1>

2. You got some nice 'SEO' feature to get them to click the button necessary for execution. I like this feature, it does what it has to do. But it drops a .vbs file on the desktop. Maybe this can still be fixed ? I'm pretty sure it can, but it's not a very big deal though, as the .exe is already executed.

3. This builder works flawless, simple and fast. No remarks other than the .vbs file dropping on the desktop for the 'MS Word .doc "Read more" exploit' method only.

4. This is probably one of the best builders you can buy at the moment, if he keeps updating it like this.

Thanks for the vouch copy. This was my honest review.

Exactly. It not use autoopen, so wont trigger deeply macro scanners

purest21 - December 9, 2016, 4:49 am

Nobody has mentioned the main spreading problem which is UAC prompt messages. Does this tool bypass UAC when the exe is downloaded and being executed? Cos that's the main issue.

Secondly, what happens if the embedded exe is .NET dependent? Like if you're spreading for example njrat, and the client does not have .NET framework 3.5 installed, what happens then? Or must we use a native rat with this tool?

And Three; Is the tool itself .NET dependent?

Your sincere answers to these questions will be appreciated

?Vox Populi - December 9, 2016, 6:22 am

I do not support UAC bypass, if .exe require admin privileges.

Please make sure that you speaking about UAC, not Zone ID (which is not triggered)

Doc's do need .NET framework to work. It supports any kind of file. Tool is not .NET dependent.

Is it true that the doc can't send over email??

Who have sent through gmail should confirm this

(Dec 2, 2016 06:02 AM)hostbob Wrote: [\[CITE\]](#) to clear this, if the document uses Auto_Open/Document_Open don't deceive people saying it delivers into gmail. it will attach but will not receive, i hate when dudes get ripped of what they desire to get. @David inbox me your build i will proof this ain't worth it

Are you serious this can't deliver into gmail? ?

It can be sent. For doc 1 option, it require trusted gmail account.

Doc 2 is sendable cuz do not have AutoOpen

I've just tested it. The tool is completely FUD and executes flawlessly.

OP, I'd really recommend you to create features like adding text after macro's are enabled, and maybe a template option so you can trick people into enabling easier.

If you'd add that, it'd be awesome.
Oh and an UAC bypass would be s1ck

These options can be obtained in private stubs.

Kisame? - December 15, 2016, 9:39 am

Why wouldnt you add that to the builder?

Maybe I will. More features is more code to refud. On public builder it may be problem on bigger amount of users. Private stub FUD period is only depending on behaviour of user
