Thread: [Port Scanner \[Extremely Fast/Simple\] \[Project Included\]](#)

_UnderDog - November 30, 2016, 10:30 pm

So I am inbetween coding a new program (info here: hackforums.net/showthread.php?tid=5448805) and I am implementing some of my older projects to this new program and discovered this. I had planned to release this port scanner to HF a long time ago but didn't see any uses for it, hopefully you can find it useful ?.

It is extremely fast (up to 500 ports scanned under 2 seconds using an external host) and supports scanning all ports of a desired target automatically.

Things to know before downloading:*This is under development, you may find errors (usually that crash the program but I have tried to make it as stable as possible).

*It is possible that the program becomes very resource demanding when using 'full scan'. I added a GC so it stops it from using mass amounts of memory but this can cause it to lag spike for 3-5 seconds.

*Speed can vary, some hosts may slow connection speed due to mass amounts of attempted connections and may slow to speeds of 500 ports withing 5-15 seconds.

*Scans must be done with an IP not a DNS

Program

- VirusTotal:

virustotal.com/en/file/5b93f06580f80637e28e6fc19b8d11034d352a674949f1688134a1a1828d5234/analysis/1480572839/ (1/55 unsure why, feel free to debug from project if you do not trust)

[Download compiled file](#)

[Download the project](#)

Anyways thanks for sharing, but next time use GitHub for your source, please.

_UnderDog - November 30, 2016, 11:22 pm

Sure thing. I just wanted to make a quick post to stay active (and finally release this).
