All carriers can be tested with the free bomb tool.

NastyGrapes - December 6, 2016, 12:11 am

Im testing it on my phone and its not working. Am i missing something? My carrier is listed as well.

Edit: Finally went through but it shows the website that does it so my friends could just do it back to me. Not interested. GL with sales!

It only does that on the test bomb, if you don't want that message sent afterwards, then buy the full version

Express Me - December 7, 2016, 9:25 pm

Finally a web based bomber is back I had it last time also love it

XXX - December 7, 2016, 9:29 pm

How long does it usually take for the sms to start coming in after you send on the panel?

NastyGrapes - December 7, 2016, 10:25 pm

(Dec 7, 2016 10:29 PM)EGLZ Wrote: [\[CITE\]](#) How long does it usually take for the sms to start coming in after you send on the panel?

It sends to slow. Wish it was faster.

High On Quack - December 8, 2016, 5:27 am

It should only take a minute or two to receive texts, I am working on increasing speed, it's mostly up to the carriers whether it's delivered quickly or not.

CatsCattail - December 8, 2016, 7:47 am

Vouch for dude, very trust worthy.

GoGrease - December 8, 2016, 11:21 am

I won the lifetime license in another thread and just recently tested the service coz i was busy last week. It works great with American carriers. Have not tried any other yet.

My buddy from states messaged me saying ~" you are a dick man! my phone wouldn't stop buzzing lol"

Vouch for the service. It does what the OP claims it does.

nullphreak - December 22, 2016, 2:37 am

Does this support UK carriers, do you need to know the carrier of the victim?

There are online carrier lookup services that can verify what carrier if provided with phone number.

You need to know the carrier, it works on many UK carriers, try one with the test bomber.

Pretty much all UK carriers disabled email->sms feature. Hence none of the tools sold on HF would work. I recommend you buy a pay as you go sim with unlimited text messages and automate sms sending with a smartphone. Surely there are apps that can do it. If not .. writing one should be

relatively easy .
