Hey. I'm thinking of buying a gaming mouse for Minecraft and I'm wondering if the CPS changes or whatever. Also is there a large difference between wireless and wired gaming mice?

A gaming mouse for minecraft?? Do you mean like PvP or something? I've never heard of that

If you just need a regular mouse for gaming or something I personally use the Razer deathadder, it suits me just fine

[This](#) is by far the best mouse ever created. Also use in conjunction with [this](#) mousepad and you will never lose a game.
