Save this as a .js file, run it in iMacro when you are signed into Instagram and AddMeFast

```
Code var macro = "CODE:"; macro += "" + "\n"; macro += "SET !ERRORIGNORE YES" + "\n";
macro += "TAB T=1" + "\n"; macro += "TAG POS=1 TYPE=A ATTR=TXT:Instagram<SP>Followers"

Not sure if it still works but it's worth a shot.
```

I am using python with selenium webdriver with Firefox. It is working well in not headless mode. Things it can do are Facebook Posts Likes. First it login in Facebook then goes to Addmefast then login and goes to Post like page then loop clicking button and like post. Thats all I made dis year. It has some issues like Addmefast give u a cloudflare protect with recaptcha check. My issue with this I cant click on that checkbox in selenium. it only happens if you do this script often.
