Thread: [CAN I GET A NATIVE UAC BYPASS BUILDER THAT CAN WORK WITH NATIVE RATS](#)

**purest21** - December 6, 2016, 3:20 pm

hey people, which native UAC bypass builder or native crypter with in-built UAC bypass would you recommend to crypt native rats like darktrack etc.

most UAC bypass I tried always require .NET framework 2.0, even in windows 8 which comes with 4.0 pre-installed it will still prompt you to install a version of .NET framework. why is that? i'm fed up with all these .NET prompts.

can't i get a good native crypter [FUD or even UD] with UAC bypass that can easily install in remote computer once double-clicked and no message prompts or .NET stuffs. thanks as you contribute
