Thread: [Modded Kik](#)

shwb_ - December 7, 2016, 6:06 pm

I'd like to create my own modded Kik application, but I am unable to find any source code for kik its self.. could anyone point me in the general direction for this..?

Aveling - December 8, 2016, 10:48 am

If you are talking about Android APP's then I can probably point you to a direction.

The APK file is basically a .zip/.rar file containing the source code, you can extract the APK file with 7zip.

The APK files can be downloaded from [APKMirror](#).

I hope that this helps you.

Yeah that is what I mean, I am trying to create my own kik like Pikek and Ghost Kik, I just didn't know where to get the source code for Kik to do such a thing.

I suggest emailing kik support and see what they have to say.

TheSnake91 - December 12, 2016, 8:56 pm

You gotta read up a little bit about reverse engineering APK files, you can get to the source code and edit it then
