okay i have spk v3 and galaxy v3 and i cant get them to work the forms wont fully load help

Errors during load. Refer to 'item' for details

Something unexpected appeared in the ASCII form file. Visual Basic created a log file to provide more detail about the errors. You should examine the log file to determine the severity of the problem. Sometimes you can safely ignore the errors (for example, Version number missing or invalid...). Other times, however, the errors could cause the form not to run as expected (for example, Class MyClass in control MyControl was not a loaded control class).

Search some warez forums or sites for "Codejock Xtreme toolkit"

Install that and then the forms will be fine.

Let me know if you need a serial for it once youve found a download.

Did you go to the start menu & then registrator on the codejock menu & register the controls using that? If not youll need to do that before it will work.
