Thread: [Bungeecord Exploit](#)

Deutsche Bank - December 9, 2016, 3:03 am

Whenever I try the exploit, when I login the users permissions are reset, as in they are in the default group and not the owner.

I know this is an old exploit but a popular server from my region reset and is now vulnerable as the new developer is clueless.

Any solutions?

Are you joining with the right uuid? Could also be some sort of 2fa code.

how2set uuid

Thought the bungee server automatically matched uuid with name

do you need a different bungee jar with playerUUID field?

dl'd this https://mega.nz/#!ylhxQlwT!KV8EAGaxvjhhxYDFAZ61WMvGibTegN_gl7TxAjhMafc but its out of date

Feel free to add me on skype, I'll send you my 1.11 copy of ExploitCord.jar (bungeecord with UUID/IP Address spoofing) - skype: redacted
