LANC Remastered

So I remade LANC once and got some positive feedback and now i'm back at it again.
Added a ping tool, highlighting, and also added a LAN Device sniffer!

The LAN Device sniffer is something I personally think was pretty cool to add.

Anyway here's virus scans and a DL link!

Click [here](#) to download the latest official release.

Click [here](#) for a virus scan of the archive.

Click [here](#) for a virus scan of the executable.

As always i'd love to hear any feedback and/or suggestions!

That one looks like it's because it's not extracted.

Extract all the files into a folder then try again.

joeygutierrez77 - April 16, 2017, 4:48 am

Setting IP to source works but when you go to add a label its for the local ip not the target. if you setup local ip to destination it will not work. but the label is set for the proper ip.

GLIIIIIIIIIIIIIIIIIIIIddddd

Cool to see this program is still kicking around. I have an old copy of it somewhere as well. I should dig it up. Cool little project OP.

Hi i was wondering i you could help me i downloaded the application and extracted it and when i run it i get an error "Object reference not set to an instance of an object" and no adapters show up i already have ipv6 unchecked so i don't know what it is and i can't find any videos to fix it if it helps any I'm on windows 7

Any possible ways to pull IPS with this on XboxOne ?

yeah i have a tutorial on it on my yt channel @frenzaahh

Thanks for the share bro!

Hey guys, when i switch to "network adapter microsoft on local host" lan with a bunch of 0 for spoofing ip addresses on xbox, it doesnt work at all? It says invalid mac addresses the selected device may be disabled or disconnected ? Thank youp

had an exception error with this due to it messing up a registry not sure which one but i just deleted all the broken registry's and it fixed the error.

I found a solution to LANC having an error each time you try opening, adapter not showing. etc... yes I am new to forums but I am not cap. with this you have to download literally nothing its changing some setting in your PC preventing you from fully functioning this exploit. The creator please PM so I can show you how to fix the error.

Snap ~ kcarrion34351

for faster results Im not active on here

PSA: THIS ERROR FIX IS NOT UPLOADED ANYWHERE ONLINE. I found this myself and you wont find it on any video thread etc...

Hey, I'm having the exact same problem. Just curious if you found a solution.

TheHauntedTank - May 24, 2019, 10:00 pm

After installing winpcap the object reference not set to an instance of an object error has not been fixed, the program worked fine before, but all of a sudden it stopped working, I don't want to have to switch to wireshark because it shows a ton of crap I don't even want to see witch makes the program unusable for actually pulling ip's because of having to filter through them.

FOR ANYONE THAT NEEDS HELP WITH "Object reference not set to instance of an object", I just

figured out the fix. You need to go to %appdata% on your computer, and then at the top of the file explorer where it says AppData > Roaming, you have to click on AppData. From there you go to "Local", then scroll to the bottom until you see a folder named "Psycho_Coding. Click on the folder and keep clicking on the other folders until you get to a file that says "user.config". You have to delete this file and close out your file explorer. Go to your recycle bin on your computer and empty it, then launch LANC again and it will be fixed.

Your source ip needs to be your ps4s. It should be Your router on the left side and then ps4 across that. and then source ip is your ps4 aswell.

Sometimes it works with LAN on ps4 and wifi on pc. It always works best when you have both on wifi.

used to use this ages ago on bo2 lmao.... thought id give it another try.

i have an issue, that being i dont get an option for any network adapters, except [censored].

not sure if this means anything, or if its widespread to everyone, but i get this error upon the tool opening:

object reference not set to an instance of an object

thanks for making bo2 so fun and giving me and all my old friends such a good time

Hacker2000 - July 21, 2019, 1:46 pm

Installed this today and it would show IP addresses now it doesn't show anything. Reinstalled it and also winpcap but still nothing. Anyone had the same problem or know how to fix it? thanks

why cant you update the software from 2010 to 2019 im having a hell of a time trying to get it to work

?

Lanc Remastered - October 31, 2019, 10:53 pm

Download Lanc v2, doesn't give any issues. Official website is lanc-remastered.com

To everyone having that pesky "Object reference not set to an instance of an object" error, if you're on Windows 10 you need to uninstall WinPCap and install Win10Pcap instead.

<http://www.win10pcap.org/>

Otherwise all I can suggest is re-installing WinPCap

Usefull tool. Thanks for sharing. Do u know any tool for LAN spreading?

Connorrox2 - January 16, 2020, 9:54 pm

If anyones having issues in regards to no network adaptors showing up and you have tried everything, install winpcap 4_1_3 and run Lanc remastered in compatibility mode for Windows 7.

I've managed to find a kinda perma fix for anyone who's getting an error message pop up after running it IF it's previously worked.

It's a workaround, depending on how much effort you can be bothered doing.

Create a virtual machine, I used VirtualBox, I used windows 10 bios. Install the usual things, WinPCap.

(MAKE SURE YOUR VIRTUAL MACHINE IS USING A BRIDGE CONNECTION SO YOU'RE ABLE

TO SAY HOST PC NETWORK)

Once you've opened LANC, exit the VM and click 'save state' (I've also copied a backup machine once it's closed in-case the original has issues eventually, which it shouldn't?)

Once it's saved the VM, open it back up and do what you need to do with LANC, once you're done with the VM, force close it via task manager so everytime you open the VM, it'll open the original saved version and then if you ever get an error pop up, just force close it and reopen it and the error should be gone.

Or just install the proper things. If you get an error it's because something isn't right.

Make sure you have the following installed.

.Net Framework 4.5.2: <https://www.microsoft.com/en-us/download/details.aspx?id=42642>

C++ Redistributable Package 2010:

<https://www.microsoft.com/en-us/download/details.aspx?id=5555>

WinPcap: <https://www.winpcap.org/install/>

If You're On Windows 10 Install This One Instead: <http://www.win10pcap.org/download/>

I previously used this program, worked fine. One day I got the same lonngggg error so I ended up leaving it. (This was after reinstalling the above mentioned)

Had a fresh install on my PC, came across the program again and it worked fine, and then after a few week the same error popped up, my suggestion was on the chance even after reinstalling the above the error message showed up, been a few week now using VM and whenever the issues pops up, I just revert back to the original

I wouldn't recommend using this anymore. I released a new project called PCPS and it's far better than LANC was.

Download can be found here <https://www.psychocoding.net/PCPS.php>

I've downloaded the new PSCS but it won't actually open, no errors no boxes just nothing. I've got win10cap installed, dot net the whole lot even tried with winpcap but it's not working. Any ideas?
