Thread: [Can You install a Perl Dos Script on a windows server for putty booter](#)

DevXan - December 12, 2016, 12:58 am

I have done it many many times on Linux VPS before just by typing
yum install perl, but I remember accidentally purchasing a windows vps in the past and trying to
install perl on it and was unable to. is there another command that is needed?
the problem is I am trying to get a VPS that allows dos scripts because literally no one with Linux
seems to allow it and all I have seen advertised in the marketplace for the ones which allow it are
Windows. can anyone help me out? Sorry I am kinda a skid when it comes to this stuff.
