Thread: [Some kind of virus..](#)

konjko - December 12, 2016, 12:12 pm

Pleaseeeeeee help,

Since yesterday my laptop goes black after booting to windows, my friend says it's Malware, since it's day when i want to sit in chair and do something on my laptop, today i booted it up at 9 p.m and realized it isn't black,, i can barely see icons.. So screen brightness is sooo low i cannot work on laptop, any ideas how to fix this?

You most likely can't blame this on malware. There's a computer repair section on this forum. Ask the fellas there, they can help you

konjko - December 12, 2016, 12:29 pm

Ok, i'll just add that i press Fn+f5 laptop goes to sleep and when i wake it up it works normal, but after 10-15 sec it becomes dark again

Perhaps you have an issue with your video card

You can use The DirectX Diagnostic Tool

The DirectX Diagnostic Tool is one of the most useful utilities in Windows that was designed to fix DirectX-related (video) or sound related hardware problems.

The great thing about the tool, It provides a quick and easy access to most of the important information such as video and audio drivers that you need before you upgrade or reinstall your OS.

So you can make quickly a little batch file named CheckVideoCard.bat

Code @echo off

Title %~n0 by Hackoo 2016

Color 9E & mode con cols=65 lines=3

echo(

echo Please be patient The report is in progress ...
