Thread: [rat crypting](#)

nickmckick111 - December 12, 2016, 4:31 pm

was wondering if anyone would like to teach me how to crypt my own darkcomet rats for free?

JoshuTee - December 13, 2016, 4:28 am

Don't use DarkComet. It's exploitable and old.

????Kosdff - December 13, 2016, 4:48 am

Alright. I think you need to do more research on what a RAT is bud. You should choose something else than dark comet as it is vulnerable and could get your system infected.

As for crypters, none that are worth using are not free, you will need to pay for one of learn to code and create one.

Also based on the skill level you are, I assume you port forwarded your router and are using NO-IP, do not use this as your DNS will be removed. Trust me, once they catch and remove your DNS all of your clients will be gone and there is no way to get them back without them executing a new payload.

But like I said, before you start to RAT do your research as you will get caught.

Sorry for typos/errors on mobile at the moment.

I would not recommend dark comet for your rat. you can try Babylon it is free as well.

So what should be used in place of NO-IP?

qntrdaniel2 - January 9, 2017, 3:56 pm

Don't use DarkComet. It's exploitable and old.

Jenssmall - January 13, 2017, 5:48 am

I was just finished setting up my njrat, it's free and right here on HF, I was using dark comet as I knew it was outdated but was unaware of any other rats that are free on the market.

?Kosdff

Hey ?Kosdff,

If i install that Quasar v1.3.0.0 on my pc and start hacking , what is infected from my pc and what information does it get from me?

anilvac11 - January 29, 2017, 9:17 am

Learn a programming language to make your own crypter and RAT, never trust other people's tools. I recommend Python and not doing anything on Windows. I recommend Kali Linux.

WeeZick - January 29, 2017, 9:55 am

Darkcomet is so outdated..
