Thread: [RAT vs AVs safe browsers](#)

**Mr 4rs4l4ne** - December 13, 2016, 3:08 am

Does RATs take infos from avs safe browsers, like 'keyloggins, pass recovers' ?

**bzr?** - December 13, 2016, 3:11 am

Do you mean like the special browser Kaspersky and others use? If so, yeah, they block against key loggers and other things.

**CichyCichoCiemny** - December 13, 2016, 11:03 am

Some AVs install plugins for browsers, if that's what you're talking about then no. They don't protect passwords.

?

**QU?CKSILVER** - December 13, 2016, 11:24 am

RATs password recovery feature commonly work on popular browsers such as Chrome, Safari, Opera, etc. I don't think they are coded to retrieve credentials from miscellaneous browsers like Avast's SafeZone, Kaspersky's Safe Money bullshit and so on...

That, folks, is where you hire a legitimate coder to do custom plugins or a custom version

**Rottapotta** - December 13, 2016, 10:35 pm

1. Dont save ur passwords to the browser
2. Get Keyscrambler and you should be safe.
