Thread: [\[Advice Needed\]Need a good vps/webhost](#)

GrizzlyBear0 - December 13, 2016, 11:16 pm

hello honestly i'm just looking to get a good cheap webhost or a vps to run my host on.
What do you suggest which one is best and which one is cheaper.

Ofcourse

WEBSITE REQUIREMENTS are these.

PHP 5.4 or greater

A MySQL database

pdo_mysql extension enabled in your php.ini

cURL enabled in your php.ini

mbstring

php-xml

url_allow_fopen enabled in php.ini

OpenSSL (With HTTPS wrapper)

Hello & Welcome to the HF community! ?

By the way this is worded you are looking for a host to run your own " Webhost " If this is the case it really does depend on what accounts you are going to be hosting. If it's going to be Multiple MySQL databases (hosting forums or other chat software or anything that well.. Required mysql) it may be worth considering having a VPS or dedicated solution primarily for your SQL databases you can load balance software or hardware accordingly (software is cheaper)

If however on the flip reverse you are looking for a VPS as a hosting solution and your not actually attempting to set up your own host then you could try www.liquidweb.com (it's who I use and have used for years and they have never let me down and they are top in support and resolving issues.)

They meet the needs of the requirements you have specified.

I scored a 5GB RAM VPS 55\$/year out of a crazy discount shown on lowendbox.com, highly recommend keeping an eye out

You could try SPAM.

?
