Thread: [Decode asterisks](#)

ludex777 - December 14, 2016, 12:56 am

Hello. Is anyway possible to decode asterisks? I need someones email and I can find it by find my account by their username on facebook but email is covered in asterisks... Is anyway possible to decode that??

kookur - December 14, 2016, 12:59 am

There's no way to decode them because there is nothing to decode, you can only guess it.

I know the name but i dont know the email provider it starts with P dammit

excon666 - December 14, 2016, 1:05 am

ust gues it trial and error. no other option.

Maybe protonmail.com or google for email providers with name starting from 'P'.

I counted the letters they are 9 letters I am already searching for it

Ronan. - December 14, 2016, 1:25 am

Asterisks tend to be arbitrary placeholders, rarely ever indicative of the actual length.

Why would they obfuscate part of the email only to give a huge clue as to what the email is?

I know the person and I looked if the number of asterisks match the user name and it did the only problem is I dont know email provider it starts with P and it has 10 letters :S

@Element - December 14, 2016, 5:12 am

Yeah seems impossible since they are just asterisks with nothing hidden behind them, On certain sites the length and amount of them will be true.

It's possible that is the case, though it's far more likely to be a coincidence.

I have google it but there are to many that start with P and I couldnt find it

CichyCichoCiemny - December 14, 2016, 12:06 pm

There really aren't that much email providers, try them all.]

?
