Thread: [Anonymous & Encrypted email providers - Anonymous online part 2](#)

liam270591 - December 16, 2016, 6:52 am

Hello community,

This is a follow on post. Still rather basic but it's here in order to help people from the beginner hacking section. This is target to help people stay as anonymous as possible and this is in relation to Email providers.

Will this keep me anonymous?

Good question!! The answer is no. Anonymous email forms the basic foundation of anonymity over the web. Internet is no secure storage, but you have a say in who has access to your data and who doesn't. If that is no, anonymous emails is one way to ensure your emails are not trackable online.

Note: Anonymity is not possible on the web without hiding your IP address, so you must use Tor, or any other proxy or VPN service before using the services below to remain anonymous on the Internet

Please note before starting you are connected to your VPN, Or using TOR or a proxie to hide your IP. Otherwise it renders this useless.

tormail.org - Tor Mail is a Tor Hidden service that provides truly anonymous email service. It runs on the hidden service network of The Tor Project so you must use Tor to access and use it. Tor Mail is developed for super anonymity. As it's built over the Tor network, it cannot be traced easily.

<https://www.guerrillamail.com/> - GuerrillaMail offers you a disposable, self-destructible, temporary email address to send and receive emails anonymously on the internet. Mail is deleted after an hour. You only need to choose an email address; no personal data is required.

[Secure mail click here](#) <--This service encrypts your mail using 4096-bit key, which makes it unreadable by anyone except you. It doesn't ask for your personal information or IP address to sign up. They also have a zero-tolerance policy against spam.

Send Emails Without Registration

Sometimes you just need to send emails without prior registration. In fact you don't even need to receive any feedback. If this is you, here are several services that is essentially a form where you put in details of the email you want to send. Note that there is no way for the receiver to get back to you.

--> <-- [Here you will find only a simple form to fill in the receiver's address, subject and the email content \(you can also attach a file to the email if necessary\). To get a reply, opt to provide a reply-to email address, otherwise this is a one-way ticket to sending an anonymous email.](#)

- <http://send-email.org/> - You only need to enter the receiver's email address, subject, and the message. Over 100,000 anonymous emails are sent every day for free.

- https://cyberatlantis.com/anonymous_email.php - It offers a simple interface to provide the receiver's email address, subject, and the message. It strips off the IP address from your mail, and thus you can't be traced easily. It asks for none of your personal information.

- [Receive Emails](#)

- [If you just need a disposable email to confirm links and don't want to deal with the newsletter or other deals they might send you in the future, try these 7 email services. Accounts are created automatically when a mail is received for that address.](#)

- [\[url=https://securemail.hidemyass.com/\]Hide My ass - Email](https://securemail.hidemyass.com/) - Hide My Ass! offers a free anonymous email account, which can be used to receive (but not send) emails. You can opt for new email received notifications to be sent to your real email or even set your inbox to "self-destruct" with an expiration date.

<http://mytrashmail.com/> - Get open and public email accounts created upon receiving mail or sign up for a private and password-protected one to receive mail. The accounts are temporary and will be deleted automatically after some time.

<http://notsharingmy.info/>

NotSharingMy.Info provides you with a permanent anonymous email address to receive emails without providing any traceable and identifiable information. It only requires your real email address for signing up. All emails to the anonymous email address is forwarded to your real email address.

Again very basic but in some way I hope this helps.

Do you think
anyforums
Or shopping sites ,paypal, money transfer websites
Ever accept this ?

liam270591 - December 16, 2016, 7:07 am

Yes they will & do.

FusionXPO - December 17, 2016, 9:13 am

Thanks for this. Helpful links.

liam270591 - December 17, 2016, 3:25 pm

No problem at all. Like my other thread this will be updated over the course of this weekend.

Xx_iDon_xX - December 17, 2016, 11:42 pm

How safe is this? I'm new to this

Which part? It's all totally safe. If you are stuck with anything in specific I can assist you in the matter.

Ang3l0fC0mputerDeath - December 18, 2016, 12:29 pm

Now this is one of the things I was looking for.

liam270591 - December 18, 2016, 12:35 pm

Glad you found this useful. Ill be adding more shortly.

Unit 61398 - December 18, 2016, 2:13 pm

sigaint is pretty decent and they have an onion site

<http://sigaintevyh2rzvw.onion/>

radikahl - December 20, 2016, 6:51 pm

I thought I read that HMA keeps logs and, in fact, have handed them over. Not very anonymous.
Good list though, hope you will add to it for more options.

(Dec 18, 2016 03:13 PM)Unit 61398 Wrote: [\[CITE\]](#) sigaint is pretty decent and they have an onion site

Doesn't sigaint have non-onion proxys so you can use them anonymously on both sides of the web?
