Thread: [HFES domain expired, older HFES has adware now](#)

ze-slade - December 22, 2016, 9:05 am

Over the past three or four day I've been having issues with adware, but the thing being it was ONLY on hackforums, I decided to make a thread in the whitehat section to geet help. Nobody was able to fix it until today when [CJOS100](#) said this in my thread:

(Dec 22, 2016 06:29 AM)CJOS100 Wrote: [\[CITE\]](#) Hey I was having the exact same problem a few minutes ago, started disabling things and I narrowed it down to the tapermonkey script "HF Enhancement suite", after disabling it I haven't had any more popups.

Edit:

After looking at the script, the download URL is weird: <https://i.imgur.com/ckJg6Oo.jpg>

It leads to this:

PHP Code

```
<?php
if (typeof _popwnd == 'undefined') {
    var _popwnd = -1;
    function _popwnd_open(){
        if (_popwnd!=-1) return;
        _popwnd = window.open('http://findbetterresults.com/?dn=sublyme.net&pid=9PO755G95',
'_blank', '');
        _popwnd.blur();
        window.focus();
    }
};
window.addEventListener('click', _popwnd_open);
```

As soon as I disabled it, I stopped having my adware issue. Now I went on discord and luckily [TheChi?f](#) was in there and figured out that the domain was expired and somebody bought it. here's proof of expiring: <https://who.is/whois/sublyme.net>

This is on the older one, I'm not too sure about the current one, though.

J?son - December 22, 2016, 9:06 am

I suggest using the new URL

<https://raw.githubusercontent.com/hashlabxyz/Userscripts/master/HackForums/HFES/HFES.user.js>

TheChi?f - December 22, 2016, 9:07 am

(Dec 22, 2016 10:06 AM)Jas?n Wrote: [\[CITE\]](#) I suggest using the new URL

<https://raw.githubusercontent.com/hashlabxyz/Userscripts/master/HackForums/HFES/HFES.user.js>

It still uses the same domain.

Riyu - December 22, 2016, 9:07 am

(Dec 22, 2016 10:06 AM)Jas?n Wrote: [\[CITE\]](#) I suggest using the new URL

<https://raw.githubusercontent.com/hashlabxyz/Userscripts/master/HackForums/HFES/HFES.user.js>

Pretty sure thats the same one?

J?son - December 22, 2016, 9:07 am

(Dec 22, 2016 10:07 AM)TheChi?f Wrote: [\[CITE\]](#) It still uses the same domain.
No the one he was using was from sublyme.net

This is on Github

Kaspah - December 22, 2016, 9:07 am

This is totally irrelevant but did everything work out with the keys?

ze-slade - December 22, 2016, 9:09 am

(Dec 22, 2016 10:07 AM)Kaspah Wrote: [\[CITE\]](#) This is totally irrelevant but did everything work out with the keys?

You should have just pm'd me about this, no I haven't got them yet because I currently have no use for them.

J?son - December 22, 2016, 9:10 am

(Dec 22, 2016 10:07 AM)Riyu: Wrote: [\[CITE\]](#) Pretty sure thats the same one?
No.

Cammy - December 22, 2016, 9:10 am

(Dec 22, 2016 10:07 AM)TheChi?f Wrote: [\[CITE\]](#) It still uses the same domain.
The Namespace class doesnt even connect to the domain afaik, you can even put words in it. iirc it serves as an identifier so scripts wont conflict if they have the same name or whatever

J?son - December 22, 2016, 9:14 am

(Dec 22, 2016 10:10 AM)Cammy Wrote: [\[CITE\]](#) The Namespace class doesnt even connect to the domain afaik, you can even put words in it. iirc it serves as an identifier so scripts wont conflict if they have the same name or whatever
Ye. Still using HFES and having no problems with it.

TheChi?f - December 22, 2016, 9:15 am

(Dec 22, 2016 10:14 AM)Jas?n Wrote: [\[CITE\]](#) Ye. Still using HFES and having no problems with it. I had no problems with it as well, but you can just Ctrl + F through the userscript, and you can clearly see more than 50 mentions of the domain.

ze-slade - December 22, 2016, 9:15 am

(Dec 22, 2016 10:14 AM)Jas?n Wrote: [\[CITE\]](#) Ye. Still using HFES and having no problems with it. The newer one has no issues AFAIK, but the older one has the adware like issue.

J?son - December 22, 2016, 9:17 am

(Dec 22, 2016 10:15 AM)ze-slade Wrote: [\[CITE\]](#) The newer one has no issues AFAIK, but the older one has the adware like issue.

Yea when you first alerted us of this, I had to take a closer look of the script

Newer script is perfectly fine (From Github)

bzr? - December 22, 2016, 9:18 am

Surely whoever has purchased the domain was / is on HF. Kinda scummy thing to do...

Cammy - December 22, 2016, 9:21 am

I dont even think its sublyme.net but rather <http://findbetterresults.com/>

ze-slade - December 22, 2016, 9:22 am

(Dec 22, 2016 10:17 AM)Jas?n Wrote: [\[CITE\]](#) Yea when you first alerted us of this, I had to take a closer look of the script

Newer script is perfectly fine (From Github)

Yeah, I wanted to post in the ub3r section first to verify. I wasn't sure if I had an outdated version or what.

Visualize - December 22, 2016, 11:10 am

Yeah I kept on getting the findbetterresults shit so I disabled the userscript. I'm glad I wasn't the only one having problems

ze-slade - December 22, 2016, 11:23 am

(Dec 22, 2016 12:10 PM)Visualize Wrote: [\[CITE\]](#) Yeah I kept on getting the findbetterresults shit so I disabled the userscript. I'm glad I wasn't the only one having problems

Yeah, I couldn't even use HF efficiently, it was really annoying.

ze-slade - December 22, 2016, 11:46 am

(Dec 22, 2016 12:24 PM)Yani Wrote: [\[CITE\]](#) You should figure out affected versions, especially because the code has already been edited even before word got out.

This one is : <https://hackforums.net/showthread.php?tid=3603256>

the download link is <https://goo.gl/h6L7HX> and when it expanded it links you to http://www.sublyme.net/site_media/userscripts/HFES.user.js which is awfully strange how somebody who bought it, knows the download path. ?

and it seems as though the newest version could have issues as it has sublyme.net in it. here's the code to the newest version: <http://pastebin.com/SjxqYSei> and to the oldest version:

<http://pastebin.com/U9wnhJuX> and here's the download that is given with that goo.gl url <https://a.cuntflaps.me/kgb.user.js>

So from the looks of this, all versions are not to be trusted?

Hash G. - December 22, 2016, 4:39 pm

Alright some explaining:

Someone bought the domain sublyme.net and uploaded his own script (which is, indeed, an adware) to the same path. So when the OLD HFES will search for updates; it'll find one and download it, thus installing the adware.

That's why I suggest everyone to update their HFES to the new version that was posted earlier on this page. It shouldn't update to the "adware url" but to my GitHub which can not expire or be bought or whatever.

I just sent a PM to a staff so he'll move the thread somewhere where it can't be seen since it now leads to an adware.

(Dec 22, 2016 10:10 AM)Cammy Wrote: [\[CITE\]](#) The Namespace class doesnt even connect to the domain afaik, you can even put words in it. iirc it serves as an identifier so scripts wont conflict if they have the same name or whatever

Indeed. A namespace is just an identifier and it won't query the link.

(Dec 22, 2016 10:15 AM)TheChi?f Wrote: [\[CITE\]](#) I had no problems with it as well, but you can just Ctrl + F through the userscript, and you can clearly see more than 50 mentions of the domain.

Yes. But even if it mentiosn sublyme.net, it won't update. That's the @downloadURL directive that does this.

(Dec 22, 2016 12:46 PM)ze-slade Wrote: [\[CITE\]](#) This one is :
<https://hackforums.net/showthread.php?tid=3603256>

Everyone who uses the old version will sooner or later have these adwares.

ze-slade - December 22, 2016, 6:32 pm

(Dec 22, 2016 06:39 PM)Yani Wrote: [\[CITE\]](#) Just as I thought...

Every javascript URL serves the same javascript file:

Code http://www.sublyme.net/site_media/userscripts/URL_THAT_DOES_NOT_EXIST.js
It's all automated by the advertisers and it isn't a targetted attack towards HF.

Sedo is the domain provider, they currently have the sublyme domain "parked". They offer a service called Zero Click advertising, which monetizes parked domains.
As you can see, it isn't really "adware" although it's definitely dirty business.

(https://sedo-us1.custhelp.com/app/answers/detail/a_id/3757/~/how-does-zero-click-work%3F)

Some more info:

<https://www.namepros.com/threads/adware-virus-like-activity-with-sedo-parking.841480/>

<http://domainnamewire.com/2014/10/01/warning-do-you-know-where-your-parked-domain-traffic-is-going/>

<https://www.namepros.com/threads/zero-click.748967/> Well, I wasn't sure what the exact term would be but it came off as adware to me since it acted as such, almost anywhere I clicked on HF would open it, but it only did it once, once the page was refreshed it'd do it again but it needed another refresh.

If it isn't a targeted attack on HF, how did they know the path and everything else?

(Dec 22, 2016 05:39 PM)Hash G. Wrote: [\[CITE\]](#) Alright some explaining:

Not sure about the old script, but the updated script still has over 50 mentions of sublyme.net

And one of them being, var urlBase = "http://www.sublyme.net/site_media/"

Hmm that's actually very unfortunate, but thank you for your report OP!

I enjoy using HF "vanilla" myself, I could never get used to HFES.

Omni is still better

(Dec 28, 2016 03:32 AM)Vitani Wrote: [\[CITE\]](#) Hmm that's actually very unfortunate, but thank you for your report OP!

I enjoy using HF "vanilla" myself, I could never get used to HFES.

I never really noticed when HFES stopped working initially, I only noticed when It was said that the old HFES was causing my issues, so I disabled it and started using the new one.

J?son - December 29, 2016, 8:26 am

Alright so I installed Adam's script a few days ago when he sent the PM. I wake up today and I started getting popups everytime I clicked on a thread

Mr Whiskey - December 29, 2016, 8:35 am

As I said when the domain expired everyone needed to uninstall HFES. If you logged into your account at all with the script installed you need to change your password, and if you use that same password anywhere else (stupid) change it there too. It may not have grabbed your password, but why risk it?

(Dec 29, 2016 09:35 AM)xadamxk Wrote: [\[CITE\]](#) What version are you running?

Post a pastebin of the script you have installed.

i installed the script you mass sent in PM

(Dec 31, 2016 10:51 AM)xadamxk Wrote: [\[CITE\]](#) So far I've released 3 userscripts that offer the same (but improved) features that HFES offered:[\[Userscript\] EasyCite](#)
[\[Userscript\] Header Links](#)
[\[Userscript\] Smart Quotes](#)
If I get suggestions on what other features users want, I will make them :)
Hide Location. ?

Egregious Jr. - December 31, 2016, 9:54 am

I was getting some sort of adware warning too. Thought I was infected.

I'll update OP with this once I'm on pc

Captain Steve Rogers - January 5, 2017, 11:17 pm

HF Enhancement Suite thread is no longer there.

Seems like it got junked.

Seems like it got junked.Yeah, it's been gone for awhile, staff got on that pretty fast.

Charger - January 6, 2017, 5:14 pm

Hmm... 2 weeks later and I sill don't know why this is in the marketplace lol

Maybe if you could read, that'd be pretty fantastic.
