Thread: [\[Tutorial\] Create a skype account with an username of your choice](#)

146918496 - December 23, 2016, 7:10 am

Advantages:

- skype username without live: in front of the name
- create a skype account without any confirmation (phone or email, as this is required nowadays)

Requirements:

Android phone

OR

Bluestacks or a similar program (basically any android emulator)

In case you already have the newest skype version on your phone, make sure to deinstall it first, as the application will just update itself while installing.

How to:

1. Go to <http://www.apkmirror.com/> (disable Adblock to be able to download anything on the site) and search for skype in the search bar.
2. You need an older skype version, I've tried it with the 6.10.0.606 and was successful, you skip the searching step and use this link instead.
3. If you are using an Android phone, transfer the file to your phone and install it (you have to allow installations from untrusted applications in your settings).
4. Run the program like any other application on your phone and you are able to choose an username.

Enjoy HF.

It doesn't as reported, stop bumping your own topic, reputation fishing.
