[#] Mirai Tutorial [#]

By: Jihadi4Potus/Jihadi4Prez

;I made a pretty in depth tutorial on how to setup Mirai, I'm not going to post the whole tutorial here because I would have to change alot of link since I can't post links yet. It would be to much of a hassle on me and the people wanting to set this up. So I posted the tutorial on my pastebin account and my youtube channel. If you would like to check it out the links are down below.

Youtube Video - <https://www.youtube.com/watch?v=G4vUp3ydjs0> (Keep in mind this isn't the FULL tutorial, I have to record part 2)

Pastebin - <http://pastebin.com/u/Jihadi4Prez> (This is the full tutorial except for scanning.)

J?son - December 25, 2016, 12:23 pm

hey man little tip for you

ur tutorial is garbage

Thanks man

resell - December 25, 2016, 1:20 pm

can vouch, the tutorial is amazing.

devid - January 11, 2017, 6:49 pm

hey men can you are configure bot & cnc on same server .
how it is possible .

dareknox - January 11, 2017, 8:31 pm

Hi there,

I could compile cnc and run it.

The only thing is that i can compile the c files like scanner.c and run them independently.
Any help on that?

resell - January 12, 2017, 9:21 am

el grave o diggo

pls stop

Doomslayah - January 12, 2017, 9:50 am

pls stop

Break his spade and make sure he doesn't do it anymore ?

devid - January 13, 2017, 3:10 am

hi

i had configure both cnc & bot server .Connection b/w both server had established .

at last stage i run following command:-telnet domain-name

than i got following error:-

Dial tcp: missing port in address 127.0.0.1

i need resolve this problem please help me .

i had already add port no after 127.0.0.1:3306 at location /mirai/cnc/main.go.

After that same error .

devid - January 15, 2017, 10:52 pm

is it working on Linux or not .

medico.re - January 15, 2017, 11:10 pm

(Jan 15, 2017 11:52 PM)devid Wrote: [\[CITE\]](#) is it working on Linux or not .
only works on windows xp and windows 10

devid - January 20, 2017, 3:14 am

ok don't worry i had set up on linux .

qbotwithasupermicroontop - January 20, 2017, 5:48 am

does this mirai setup come with a new free door also?

ItsRemo - February 27, 2017, 7:43 pm

this dude legit has a xbox 360 rgh app on his pc, i dont think you need miari to hit off 10 year olds bud.

Nipsu - February 28, 2017, 11:00 am

Help something went wrong my mirai is out of control and calling me a faggot

heroplay15 - February 28, 2017, 8:02 pm

Cannot make the loader to work. Do I need to update the main.c in the dlr folder?

heroplay15 - March 2, 2017, 6:47 pm

Cannot make loader.dbg to work but I was able to connect to CNC using a pre-installed binary to a target device

TigerRoy - March 2, 2017, 8:29 pm

a serious inquiry I want to have this..

ExoticPower - March 6, 2017, 3:10 pm

nice tutorial,i see you put alot of time into it so cred for that!

V3N0M - March 13, 2017, 4:27 pm

I am still amazed that there is actually bh stuff here WOW, even the mentioning WOW

Camelspit - July 29, 2017, 1:31 pm

Just starting on this, Can I get those missing files by any chance? Completely from 0 and 0

knowledge, trying to get a deeper understanding on how Mirai works

Need help setting this up anyone free?

mattcbow - August 20, 2017, 7:45 pm

Hey guys I've been really trying to learn how to set it up myself and I keep on getting stuck. After setting up the cnc and trying to run the first bot to start the scanning process I get this. I assume I have to edit the code to allow the machine to be a bot and a cnc, but I cant figure out how to do that or if something else is blocking me.

DEBUG MODE YO

[main] We are the only process on this system!

listening tun0

[main] Attempting to connect to CNC

[killer] Trying to kill port 23

[killer] Finding and killing processes holding port 23

Failed to find inode for port 23

[killer] Failed to kill port 23

[killer] Bound to tcp/23 (telnet)

[resolv] Got response from select

[resolv] Found IP address: 0faacd43

Resolved ***** to 1 IPv4 addresses

[main] Resolved domain

[main] Connected to CNC. Local address = 262851907

[killer] Detected we are running out of `/home/dev/Mirai-Source-Code/mirai/debug/mirai.dbg`

[killer] Memory scanning processes

[table] Tried to access table.11 but it is locked

Got SIGSEGV at address: 0x0

i remember when krebs got dd0sed

blankiz - September 24, 2018, 7:38 pm

Just a quick update for this nice installer script:

The "Electric Fence" install package is "ElectricFence" not "electric-fence" anymore. No idea how or why CentOS/yum repos decided to change this.

tampering - September 25, 2018, 12:12 pm

i miss building mirai and letting telnet selfrep pull you 10k alone and you were able to hit around 200gbit good times

rroki123 - September 26, 2018, 11:13 am

i need help to setup this bot. anyone can help me ?

LxL6x7 - *October 7, 2018, 8:29 pm*

lol I see you around all of the time..
