Thread: [anybody teaching C++?](#)

DarkScientist - December 25, 2016, 7:10 pm

I am not a total beginner but I've been teaching myself C++ over past month, but I want to get more experience in it, I want work on side by side with someone so I can learn better, I read everyday and learn from it but I am more of a visual learner, if anyone body is teaching C++ or tips to where or how to learn it fast that would be great!

Thank You! ??

PirateSec - December 25, 2016, 7:16 pm

Same here. I'm also a visual learner. I'm barely on the intermediate level. (Still learning)

I learned the basics from: [Buckys C++ Progammimg Tutorial](#)

It's great.

What is your goal, like what is your motivation for learning programming?

Since from my experience, different objectives comes with different ways of learning. Then again, it might just be a subjective thing.

Read what I quoted and you'll understand. Hopefully.

Best advice is practice and test yourself every so often.

When u read a book test your knowledge by applying it then test your self and learn in small chunks
at a time

Then repeat and repeat. There is no shortcuts it takes a long time to learn but if you become
consistent everything gets easier with time. You need to start with the basics before u can jump to
the more advance stuff.
