Thread: [\[Royalty\] \[Tutorial\] Multiple configs with Huion tablet driver](#)

ze-slade - December 26, 2016, 9:33 pm

So, I'm a pretty avid osu player but tonight I had an issue, I realize that I needed to reset my tablet area in the driver section to draw. That's an issue for me since I don't like guessing where it was last, plus I don't like messing with my settings once I found something I like. Anyways, on to the tutorial.

Step 1: Navigate to where your driver is located, for me it's "C:\PenTabletDriver".

Step 2: locate a file called "tabletconfig.ini" and make a copy of that file.

Step 3: Rename it something like "tabletconfig_OSU.ini".

Step 4: Go into your tablets settings and create the config to how you like it for drawing or for something else.

Step 5: When you want to play osu/draw you can simply edit the current "tabletconfig.ini" to "tabletconfig.ini_OSU" or "tabletconfig_Draw.ini" and then remove the "_OSU"/"_Draw" from the file name.

Sorry this isn't the most detailed tutorial you've ever seen, but it's something that's made me not draw for a little since I didn't bother to look up any tutorials, but when I thought of it again tonight and thought of this. Hopefully this will help someone, I'm not sure how Wacom's drivers are like, I'd have to download it and check it out if anyone's interested. I'm sure it's similar if not they have their own way of having multiple settings.

My past work is like a five year old, I'm not very good at drawing and I don't focus on it too much since I prefer to have everything looking perfect which takes up more time than it should. I'd prefer not to post anything because there's nothing of quality to post.
