Thread: [Little problem with to insert an image](#)

iGameKing - December 29, 2016, 4:39 pm

Hi hackforums!

I face a little problem , just started when i try build my first website.
I've try to insert an image to the background of my site in the body part.

This one is on the .css file

PHP Code

```
<?php
body
{
    background-image: url("./images/a.png");
}
```

This one is from the index.html file

PHP Code

```
<?php
<link rel="stylesheet" type="text/css" href="./css/style.css">
```

So this is my folder situation look like this..

<https://gyazo.com/da3e9d8eac848dc04bb43a797a586741>

I've keep try all, check on syntax websites, if i've writing something wrong but i dont know why this basic sh*t cant work right. The background page is totaly white without my image.

Mr. Robot - December 29, 2016, 4:40 pm

Here's the image for everyone. Will take a look myself in a minute but lunch time.

Lucifer's Inferno - December 29, 2016, 4:41 pm

Code "<link rel="stylesheet" type="text/css" href="./css/style.css">
Should it not be

Code <link rel="stylesheet" type="text/css" href="/css/style.css">
You have the dir wrong?

Yuikoro - December 29, 2016, 4:42 pm

I'm running on two hours of sleep so forgive me if I'm being retarded but in my current state I'm 100% certain that ./ for a path means "parent, and go here".
Try getting rid of that dot.

Ah shit dud I got sniped

iGameKing - December 29, 2016, 4:43 pm

You have the dir wrong?

Already try it too, with the dot or not but the page dont want know nothing about insert my image

Ancestral - December 29, 2016, 4:44 pm

(Dec 29, 2016 05:43 PM)iGameKing Wrote: [\[CITE\]](#) Already try it too, with the dot or not but the page dont want know nothing about insert my image

../images/a.png

Try that. Let me know.

.. will bring back to root.

Can you play with the directory of the image? Just shove it all in 1 path/folder and see if it works.

Cbf checking everything

.. will bring back to root.

I know the basic how paths work and already try it too.

White. - December 29, 2016, 4:50 pm

Your index.html should look like

PHP Code

```
<?php
```

```
<link rel="stylesheet" type="text/css" href="css/style.css">
```

For the CSS use

PHP Code

```
<?php
```

```
body {
```

```
    background-image: url("../images/a.png");
```

```
}
```

Ancestral - December 29, 2016, 4:50 pm

Code body

```
{
```

```
    background-image: url('../images/a.png');
```

```
}
```

Try that. Might not do anything.

Also, can you post your whole CSS in a pastebin? Or upload your whole site to a free host or

something so we can see what's going on.

Might be a div overlapping where your image is.

Let's give a try..

The situation look like this now..

Style.css

PHP Code

```
<?php
```

```
body
```

```
{
```

```
    background-image: url("a.png");
```

```
}
```

Index.html

PHP Code

```
<?php
```

```
<link rel="stylesheet" type="text/css" href="style.css">
```

and the folder look like this

<https://gyazo.com/fa5e328759650b3ac9baec699a281e83>

And dont work..

Yuikoro - December 29, 2016, 4:52 pm

My dude

Your picture is a jpg not a png

Haha, problem solved.

Roll out boys.

NEXT TIME USE THE NETWORK TAB IN THE CHROME DEVELOPER TAB PLEASE.

It'll tell you whether or not an image is linked properly.

Oh sorry wronge gyazo, i've noted thats was wronge and i replace it with the right one.

This is correct gyazo

<https://gyazo.com/7ef34d870d7099f61035b311ece21ff2>

but still dont work

Yuikoro - December 29, 2016, 5:01 pm

Yo dude you were right! i need to sleep a bit too many hours of work, so i've change that to the correct name , path and everything.. check again ..

Nope f*ck that i'm uploading just the essensial to a hosting services

Mr. Robot - December 29, 2016, 5:11 pm

Haha try biz.nf - you get a free .co.nf domain :D

Yuikoro - December 29, 2016, 5:14 pm

Can you screenshot your files in every related directory and your source to each file

iGameKing - December 29, 2016, 5:23 pm

Little update i dont know why on <http://plswork.co.nf/index.html> works just fine and my pc no..

Thanks to everyone help me, at the end there are something wronge with my pc so i will keep using this free domain and test on it.

Yuikoro - December 29, 2016, 5:25 pm

Try clearing out your cache on your browser

Mr. Robot - December 29, 2016, 5:36 pm

I see your directory as

view-source:http://plswork.co.nf/a.jpg

Are you able to try on your own PC to use that location as the image rather than hosting it locally?

For example

Code html `/* Nessun margine */`

```
{  
    margin: 0px;
```

```
padding: 0px;
}
/* Immagine di sfondo che ripete il fade */
body
{
    background-image: url(http://plswork.co.nf/a.jpg");
}
```

Rushax - December 29, 2016, 8:48 pm

Stylesheet Path:

Code `<link rel="stylesheet" type="text/css" href="css/style.css">`Goes straight into css folder as its being referenced in the index.html file for root.

Code body {

background-image: url(../images/a.png);

}Two .'s for going back a folder from css to root then it can go to the images folder from there.

Also it's not necessary for most common browsers to put the quotations inside background-image.

~ It most likely didn't work on your PC because you were going back to the root folder which is your username for the PC.

iGameKing - December 30, 2016, 1:28 am

Thanks for your answer, i'll try to move everything in my root folder.

Yo dude this works, i was like "let's give it a try but i dont think this gonna work" and .. finnaly work fine Thanks!
