Cant you just google it? Or search hf?

It has been answered so many times

Go to this section man:

[Malware, Rat, and Virus Removal](#)

malware bytes, always helps its really good and deletes most of the shit

**topsey000** - January 4, 2017, 1:09 pm

to quickly and manually delete some trojans on your PC...go to cmd, then type netstat -ano then compare PID on your task manager and look for suspicious activity then go to file location and delete.

Hope this helps
