Thread: [How do I make a blogspot/weebly a redirect link?](#)

Hubert - December 31, 2016, 2:17 pm

Is there a way to make it so that my blogger or weebly automatically redirect people to another link? Like if they click "xxx.blogspot.com" it won't even take them to a page it will take them right to google.com or whatever? I know nothing about HTML so idk how to do that or if it's possible. I tried googling it and watching videos but I couldn't figure it out

Put one of these at the top of your <head> tags. This will redirect them to what ever url you choose ONCE the page loads the meta tag or script.

HTML -

Code <meta http-equiv="refresh" content="0;URL='http://www.google.co.uk/'" />

JavaScript - Remember to remove the . if you use this one. I had to put them in stop stop HF blocking me.

Code <.script>

 window.location.href = "http://www.google.co.uk/";
<./script>

I'm sure there used to be an option to redirect users on Blogger? Been years since I used that site so maybe things have changed.
