Thread: [\[IN-DEPTH\]\[ALL YOU NEED\] HOW TO CRACK A TON OF RDP's \[PICTURES\]\[FULL GUIDE A-Z\]](#)

HeyBuddy - January 2, 2017, 11:42 pm

[PLEASE READ THIS FIRST: ALL THE PROGRAMS WERE DOWNLOADED THROUGH VARIOUS FORUMS, DO NOT TRUST THESE PROGRAMS, IF YOU DO RUN, RUN ON YOUR OWN RISK, USE COMMON KNOWLEDGE TO STAY ANONYMOUS; USE A VPN; RUN SANDBOXED; ECT]

1- You need a good I.P. Scanner; Here's KPortScan-3.0 which will get the job done.

[Click Here For Download Link](#)

[Virus Scan](#)

What it looks like:

Now, you need IP's.

Go to this [Website](#)

Then Select the Country you want the RDP's to be from

Next, Save the IP ranges and import them into KPORT that you downloaded earlier

Import IP's, do not mess with default settings and click start!

When it's done, it will spit out a .txt file with all the IP's

Now, that we have that juicy juicy IP list, we need to start the brute process.

For this; We're going to use DUBRUTE V2.2

Click [Here](#) to Download

[Virus Scan](#)

NOTE: ONCE AGAIN, THESE PROGRAMS ARE 100% NOT SAFE, USE THEM IN SANDBOX AND OR IN A VIRTUAL ENVIRONMENT, OR AN EXISTING RDP I COULD NOT FIND A CLEAN VERSION OF THESE PROGRAMS, IT COULD BE FALSE POSITIVES BECAUSE THEY ARE HACKTOOLS, BUT DO NOT! AND I MEAN DO NOT TAKE THE RISK

Run DUBRUTE and follow the steps in the following images:

Next, Import your IP List from KPORT

You're almost ready; if you're not satisfied with the preexisting common password list that is provided, simply find one off the forums.

Before starting, make sure you edit your settings in CONFIG of DEBRUTE; if you have 2GB ram, set the Threads to 100, if you have 4GB ram, Set the threads to 200; ect.

For the Usernames in Debrute Use the following generic common logins:
Quote:administrator

admin
admin1
user
user1
user2
test
test1
test2
remote
server
manager
root
support
scanner
scan
temp

For passwords use this common password list; if you're not satisfied, simply search the forum for more:

<http://pastebin.com/xVzA5Ag3>

Now just click START and good luck!

The successful cracks will be in a .txt in the same folder, if you're running sandbox make sure you click RECOVER on sandbox first or you will lose the cracked hard work!

DO NOT CHANGE THE PASSWORD ON THE RDP

it will get changed and you will lose access, simply create a new account!

You could sell these or run other stuff off them :)

Good luck People! make sure you share this thread!

Images are not mine! Credit goes to original owner!

Quackles - January 3, 2017, 4:15 am

This looks way too simple, probably going to fail at doing this though.

Cheers for the informative share OP!

It is!

Try it, let me know when it goes wrong and ill be glad to assist you :)

WindoG - January 5, 2017, 4:19 am

Hope i dont go to prison if i do this shit

descarao - January 5, 2017, 7:10 am

If you really meant that, you probably will... use common sense.. proxies, macchanger, public wifi...etc,etc,etc

Nice post.. thank you HeyBuddy

idalistrades - January 5, 2017, 7:13 am

Nice tutorial, might have to check it out later!

t0msawyer - January 5, 2017, 8:22 pm

perfect! thank for you information my friend!

hashe - January 10, 2017, 3:09 pm

very nice tuto thnx for sharing
#####

glassp - January 10, 2017, 6:21 pm

Thanks for this high quality guide! This inspires me to hack ips! One day I want to hack all of the schools computers so I can play minecraft!

nChristos - January 10, 2017, 8:24 pm

awsome guide !!
really thanks!
but i have a problem...
its normal to take all ips error and noone bad/good?

Forgiven_nL - January 11, 2017, 9:39 am

Out of curiosity, is this guaranteed to work? If you left your computer on for 24 hrs running this, would you actually crack some? How many would you guess for 24 hrs of work? I never done this before so i'm just wondering; Also, is this blackhat(illegal)?

Prawnster - January 11, 2017, 9:44 am

You are forcing your way into things that you don't own, obviously it's illegal ?

Nice tut OP :)

nChristos - January 11, 2017, 2:25 pm

in 6 hours :D

<http://prntscr.com/duguiv>

maybe i will get 10-20 rpds Good from this

HeyBuddy - January 11, 2017, 2:45 pm

look at nChristos

I crack a ton every time. hence the title.

just use a vpn or run it on a server you have already no with your real ip

MORTY - June 25, 2017, 1:03 pm

with kportscan it got up to 400k under the current process and says nothing for "count of goods" is this normal i pressed fast stop on it after 400k just to see if the count of goods updates but so far nothing from it ill keep waiting tho, will update with if its working or not just waiting for the not responding thing to go away

kingshakes - June 28, 2017, 9:18 pm

Nice tut man...keep up the good work.

og python - June 29, 2017, 6:09 am

Are you fucking serious? This is not working? You are wasting my time bro.

MatthewSky - December 12, 2018, 12:15 pm

thanks man this is awesome

RedRogue - December 12, 2018, 12:20 pm

Thanks for the nice tutorial

jammy47 - December 12, 2018, 7:05 pm

Love the idea about cracking rdps but i guess its just a little better to root the box first isnt it?

kelmscott - January 18, 2020, 5:31 am

thanks bro but dubrute is always virus detected
any fix???
