Thread: [Some way to bypass the chrome download warning?](#)

roni2228 - January 3, 2017, 3:51 am

Is it depends on the hosting? The domain name?
How can I bypass it?

yotoprules - January 3, 2017, 4:12 am

Put it in a zip file, this should also bypass Avast Cybercapture

but my RAT supposed to be for people who don't have rar program, and it's a little harder for them open rar...

I prefer use exe file, if there is that possibility.

99% have rar programs for sure :D

JoshuTee - January 3, 2017, 4:33 am

You can use .Cab or . Zip, they're built in to Windows

Or just use windows zip.

roni2228 - January 3, 2017, 5:44 am

Ok, thank you guys, I'll try it.. :)

use the extension .iso (supported in windows 8, 8.1 and 10) or just use .zip for earlier versions.

huh ?

There is an option to make a file into an ISO on w10 ?

also on windows (any version) you just right click on your .exe -> send to archive zip.

Kicking - *January 3, 2017, 9:50 pm*

Even with a .zip it has the same chance of showing the dangerous file warning.

Cyber Coder - *January 4, 2017, 4:56 am*

chrome detect hosts mostly not files, upload to some unknown website and you should be fine
