Thread: [\[UNSATURATED\] VERY EFFECTIVE SPREADING METHOD // TARGETED HQ SLAVES IN NO TIME](#)

TheMockingBird - January 3, 2017, 9:58 am

Hi there HF.

This method should get you tons of slaves, from basically anywhere you want on the internet (some forum, or some chat, or social medias...).

It is unsaturated and i'm the author. I made all the files that comes with it.

You don't need to invest anything, and it's very easy, i wouldn't say autopilot, but REALLY EASY and worth the time.

All you need is an FUD server file and a direct download link.

From all the methods i've tried, this one is really the best, it gives you HQ slaves really quick.

It takes about half an hour to set it up.

If you spend a whole afternoon spreading, you can earn a few hundred slaves, if you spend the whole week, you will get thousands.

Support is included (that doesn't mean i'm your mentor, i can answer any question tho)

PRICE:

50\$ for the method with the required files (BTC ONLY)

AUTOBUY: <https://rocketr.net/buy/c51b60722053>

Hurry up if you're interested, i won't sell to more than 10 people

My terms are:

No leaking/modifying/reselling.

No malware spreading.

No refunds.

No sales trashing.

When you purchase this, you accept these terms. They can be modified at any time.

I was suggesting someone with knowledge about the matter, as I don't.

TheMockingBird - January 4, 2017, 12:43 am

Vouch copies will be delivered to the first two people who asked for it.

(Jan 3, 2017 11:42 PM)ken0man Wrote: [\[CITE\]](#) nice tool, no vouches from the member yet?

No, it does not include sending emails or anything like this.

Check your PMs :)

UkNinja and ken0man were given their vouch copies.

Sorry for the others who asked, but i can't give more than two.

However you will get discount instead, since i'm a very nice person, send me a PM for more info...

(Jan 4, 2017 02:38 PM)UKninja Wrote: [\[CITE\]](#) TheMockingBird kindly provided me with a vouch copy of his spreading guide so I could put together a review

The Ebook is a three pages long but it covers everything you need to setup this spreading method. It is straight, to the point, written simply and is easy to understand with no frills. It could be better laid out included some more artwork and design but personally I don't think it needs it.

The Ebook includes a method which essentially has limitless variations and therefore limitless target audiences. You will however need to use your imagination a little bit here. The example OP used in the book will work effectively for sure but you can easily transfer it into a different niche and target audience.

TheMockingBird also includes a pack of files with everything you need to operate the method made by him and you should be able to set this part up in the hour that OP suggests. You will however need some more time when setting up to spread, as OP suggested it is not autopilot but semi-autopilot.

IMO the method is not 100% unique as I have once seen a similar private method (I cant remember where now) but it certainly is not public as Op has put some work into creating the pack that goes with this which IMO makes the product unique. It is not a saturated method in my opinion and technically can not become saturated.

One of the best things about this method is you can update you binary as regularly as you like to keep it FUD without having to go through all the other steps. Overall this method will work very well for you if you are serious about spreading and is certainly a more agreeable price @ \$30 now that OP has included a January discount.

GLWS ?

Thanks for the review ?

That just mean i'm not responsible for anything you do with this guide ?

it's just a guide about security and stuff, on "how an attacker could spread some exe file over the internet"

what people do is at their own risk, i just won't be responsible

ken0man - January 6, 2017, 3:06 am

honestly, this method is a bomb, this method will definitely work on 89% of HF users if used on them here , even myself (had it been i've not come across it now), guys (with little HMTL knowledge) can use this method to spread on every site. It is my first time of seeing this method.

Very tricky and smart way of getting slaves by using this simple trick.

You have my 100% vouch OP.

Goodluck with your sales

Might want to re-word it, looks like you're saying they can't spread malware using your guide lol.

Well, it's exactly the same as RAT/botnets resellers, they always claim that they sell "security software" for legal purpose, and that they're not intended for malware.

And they're right doing it.
