I never cheated on any other games on it, except of course rust long ago.

I have like 400 market transactions and trades and shit and 2600 in CSGO and random hours in a bunch of other games like gmod and arma3. I have fucking hella wins in csgo tons of commendations, i once was supreme but last time i tried to play i got ranked nova 3 but its been so long im sure its now unranked, but the account is above way above lvl 3 so its matchmaking ready. No really good skins or anything i have some old medals and shit and some stickers from a few years back. I doubt the accounts worth much because of the vac ban but im up to here any offers, i will put the account on an email once purchased and give you full access to it so you can then move the account to another email and secure it!

Offer me:c
