Thread: [giveadamn not working since it's not https](#)

ze-slade - January 4, 2017, 3:19 pm

So, I remembered this from ages ago, now that HF uses https, giveadamn can't be used? Is there any way to go around this and have the image hosted on imgur and auto update or something? -edited out due to staff's word- wasn't sure where to post this, first thought was in ub3r support. Thanks! Sure I could make it so that it just uses a static image, but what fun would that be?

b?xxy - January 4, 2017, 3:22 pm

It has to be https for the images.

ze-slade - January 4, 2017, 3:23 pm

(Jan 4, 2017 04:22 PM)b?xxy Wrote: [\[CITE\]](#) It has to be https for the images. I already tried and it just said the image doesn't exist.

ze-slade - January 4, 2017, 3:27 pm

(Jan 4, 2017 04:25 PM)b?xxy Wrote: [\[CITE\]](#) I mean, HF does not support non https images. I know it doesn't, I was wondering if there was a way I could make it so that it's an imgur link, but it auto updates like giveadamn does or if there were any other websites like giveadamn that are https.

ZCash - January 4, 2017, 3:31 pm

I don't exactly know what it is, but when I use HTTPS instead of HTTP it just shows the image.

Code https://giveadamn.co.uk/image/ze-slade.jpg

Aveling - January 4, 2017, 3:43 pm

Did you enter the HTTPS version of Giveadamn trough your browser? When I tried to look up the image with an encrypted connection I encountered a error page which told me that the SSL certificate is having issues, and this might be why your image is not showing, when I clicked the, ignore certificate button and refreshed the page here the image in ZCash's post started showing up for me.

ze-slade - January 4, 2017, 3:58 pm

Yeah, that works. But other people would have to do it, so that defeats the purpose in a way.

ZCash - January 4, 2017, 4:05 pm

So you mean you want a clickable image which will go to the give a damn link?

Like this?

ze-slade - January 4, 2017, 4:07 pm

(Jan 4, 2017 05:05 PM)ZCash Wrote: [\[CITE\]](#) So you mean you want a clickable image which will go to the give a damn link?

Like this?

-edited out due to staff request-

Yeah, but it doesn't work in my signature. It just says "image not found" plus, with it being https you had to go to the image link and click proceed, so not everyone will see it.

J?son - January 4, 2017, 4:07 pm

i suggest using imgur and https to host your signature

ze-slade - January 4, 2017, 4:09 pm

(Jan 4, 2017 05:07 PM)Jas?n Wrote: [\[CITE\]](#) i suggest using imgur and https to host your signature
Uploading it to imgur would make it a static image unlike how it normally is where it auto updates with how many damns you've collected each time someone gives you one.

J?son - January 4, 2017, 4:10 pm

Oh yea. Damn. Does giveadamn support https?

ZCash - January 4, 2017, 4:12 pm

If I preview my signature with this:

Code

```
[url=http://giveadamn.co.uk/give/ze-slade][img]https://giveadamn.co.uk/image/ze-slade.jpg[/img][url]
```

It works fine for me...

ze-slade - January 4, 2017, 4:12 pm

(Jan 4, 2017 05:10 PM)Jas?n Wrote: [\[CITE\]](#) Oh yea. Damn. Does giveadamn support https?
Unfortunately, no. Is there any way they can get it to be https?

(Jan 4, 2017 05:12 PM)ZCash Wrote: [\[CITE\]](#) If I preview my signature with this:

Code

```
[url=http://giveadamn.co.uk/give/ze-slade][img]https://giveadamn.co.uk/image/ze-slade.jpg[/img][url]
```

It works fine for me...

Previews work for some reason, but when I tried updating mine with that, it shows this:

<https://gyazo.com/569cb3e7996b79a5685f4d2904d45a00>

Yeah. Omni please find a way to whitelist it, thanks <3

J?son - January 4, 2017, 4:17 pm

No way that is happening. Email the admins and tell them to enable SSL

ze-slade - January 4, 2017, 4:20 pm

Yeah, I know. I'll see if I can contact them and manage them to enable it.

minimalist - January 4, 2017, 4:23 pm

I don't even think that giveadamn is allowed, wouldn't it count as a dynamic signature?

ze-slade - January 4, 2017, 4:25 pm

(Jan 4, 2017 05:23 PM)Minimalist Wrote: [\[CITE\]](#) I don't even think that giveadamn is allowed, wouldn't it count as a dynamic signature?

A lot of big users used to use it, I never saw them getting their signature removed or anything so I assumed it was fine, I'd assume it's a dynamic signature since each time you click it, if you didn't already, it auto updates the image on their side, your side you have to refresh the page.

?lood - January 4, 2017, 4:30 pm

This happens sometimes, maybe he will fix it by tomorrow, but you can give this a try, Code
[img=649×200] sig [/img]it may work, it did the last time this happen.

D3xus - January 4, 2017, 4:30 pm

Images, and other scripts, can't be loaded over HTTP when the rest of the site is loaded over HTTPS. Normally, the browser will give the user an option to load unsafe scripts if they're trying to load HTTP while on an HTTPS connection. There is probably a check when you use [img] tags to prevent anything from being loaded over HTTP.

I'm not in-the-know with browser or server-side specifics. My guess is a shot in the dark more than anything.

ze-slade - January 4, 2017, 4:33 pm

A guy fixed it for me by using a different website to proxy it or something he said, looks like it works on my side. Does anyone else see it? I won't name unless he wants to be named.

D3xus - January 4, 2017, 4:36 pm

I can see it just fine...But as other people have mentioned, dynamic signatures are not allowed. Your signature is pretty close to that.

Should I pm a staff to ask if it's fine? It's not like it's anything malicious, I haven't seen any other users get in trouble for it before, that's why I figured it was fine.

D3xus - January 4, 2017, 4:39 pm

Probably best that you do that. You have good intentions. I'd just err on the side of caution.

ze-slade - January 4, 2017, 4:50 pm

Staff said no, gotta remove it from the thread, remove it from my signature and close the thread, thanks for the help guys!
