The opinion i'm about to share is entirely my own, and i have not been paid to write this! I bought this tool with my own cash!

Design 7/10

The design is in no way bad, but the theme is very overused on the marketplace, this tool would look nicer with a custom theme, or perhaps something less common.

Functionality 9/10

This tool functions how its suppose to! I managed to crack a couple accounts of mine, in just under 10 minutes, and the sheer speed of this tool is great! One thing to improve on would be the program icon :)

Customer Support 10/10

Very friendly customer support! Told me how to get setup, and helped to get me on my feet. The tool was easy enough to use after this!

Overall 9/10

I dont usually recommend people to purchase stuff from hackforums, but damn, i'd recommend anyone to purchase this shit. Its HQ, works and is the best ive seen on the market.

Thanks OP, for a sweet ASS tool!

Getting straight to the point, this tool is worth every dollar. As a matter of fact, it's one of the few investments on hf that I'm actually satisfied with. It's very easy to use (coming from someone who has very basic knowledge on cracking and anything relating to the matter), it's stable (did not crash once while i had it running for 3 day), and it WORKS. I managed to crack 2 accounts of friends who had semi-'difficult to crack' passwords. I highly recommend this for anyone who is looking for a way to hack iclouds for any reason, whether it be to get specific accounts of friends or to get access to general accounts.

If this uses the backend API they send out emails whenever a login has been made from a different IP. So accounts generally get locked very fast.

Cant imagine that proxy scraper grabs working proxys because 2 or 3 other cracking tools sold here on hf have also proxy scraper which grabs non working proxys. Is that my fault ? I also searched a lot in the internet for working proxys but without paying a bit a cant imagine to find 100% fully working proxys.. or am i just to retarded lol ?

What about a password with 8+ oder even 10++ digits.. thats really common nowadays know only a few ppl with a weak pw :>

---Well obviously the software doesn't run on magic, it will take some time to crack 10+ characters. Also the proxies scraped work great on the software, because It has an in built checker aswell.

Also we do not sell cracking of 1 email. You must purchase the full product.

Yes to both! You can either do manual or let the program do the work for you.

SoullessJay2k16 - March 27, 2017, 2:47 pm

OK I used the program and I'm going to review it. I do NOT recommend this program for two reasons:

1. I didn't get the password to the account I was targeting.
2. I tested the program on two accounts to passwords I knew and now they are locked!

I used the program the way it was outlined in the OP. First of all I am not a hacker and do not have experience with programs like this. The program was advertised as being Noob friendly. I asked the seller questions on Skype but for the most part I figured out how to use it. I let the program run for over 2 hours and I never got the password to the one account I was trying to access. So I decided to test it. I used my own Icloud account and the account of someone whose password I already knew.

Now for the other account I will acknowledge that when I put that combo in the list it did generate a hit but it did not do so for my own account.

However when I tried to log in to both my account and the other account they were locked! I also know the password to the email of the person whose account I had access to so I deleted the alert they got in their email and I am just hoping that they don't have problems with their phone and reset their password. This program seems very unreliable because it uses a password list to crack the Icloud account. So if the password is not on the list you are screwed? Secondly, even if you get the password if it locks the account then what is the point?! Now you don't have access and will have to wait until it unlocks hoping they don't change their password (which is the problem I will now have with an Icloud account I already had access to).

I will also point out that I read the full thread. I knew this was already a concern but the seller said that as long as you use fresh proxies you are fine. Well I used only the proxies scraped from the program and it still locked the accounts! So now I have to change the password on my own Icloud to unlock my account, hope the Icloud account I had access to doesn't have its password changed, I didn't get access to the password I wanted and basically wasted \$30 (getting the Bitcoins for that wasn't easy by the way because they locked my bank account when I was asked to connect to the wallet).

If the seller wants to discuss this with me via PM please send me a message. The program didn't work and caused me problems. I feel I deserve a refund for this. If the seller can prove to me this program works via Skype I will recommend it but until then I do not.
