Thread: [Selling a new graphics card \\$130 including shipping!](#)

risenOG - January 7, 2017, 12:07 pm

Hey

I am selling a Powercolor r9 380 4GB GDDR5 for \$130 including shipping fees!
Must be in the U.S. only

I was going to use this GPU for my OLD build but my PSU does not have x2 6 pin connectors so I can't use it. I also do not like the AMD Crimson software compared to NVIDIA. My other PSU from my NEW build works with it perfectly fine

Lmk if you're interested! I will only be accepting PayPal.

When I used this with my i7 6700 I got around 300-400 FPS on 1280x960 in pugs and around 300 FPS in DM in CS:GO. This card is more than enough for CS and it will be able to play a lot of games at high+ settings at 1080p

Not to sales trash or be a dick but you may have better luck on Ebay, im sure most wont be interested because of your reputation or lack thereof. Again im just giving honest advice not trying to be a douche.

Dope ass card, have heard a lot of good shit about them GLWS

Invictum - January 7, 2017, 12:10 pm

Didn't you just make a post about having issues with it?

Not sales trashing, just make sure it's working and in order.

Not sales trashing, just make sure it's working and in order.I fixed it by rolling back the drivers. That

is one of the reason why I'm selling it, I really don't like AMD Crimson because the game I play (CS:GO) is on a stretched resolution which I can't do with AMD. Thanks for reminding me though!

I see that now, nice. Since it's a physical product proof of it working may help you with sales.

Such as a screenshot of dxdiag showing your current card for example, if you still have the card in.

Such as a screenshot of dxdiag showing your current card for example, if you still have the card in. Once I get back to my other house with my other computer I'll take some pictures of me using it.

Still trying to sell hit me up!
