Thread: [Win8 and Win 10 Supported RATs?](#)

Black_Swan - January 12, 2017, 6:25 am

Hello, I am fairly experienced when it comes to this but I was not doing stuff like this for quite a while and I know older rats are not so stable with new Windows Versions. I was just wondering which is the most stable Free and Paid version?

Viotto01 - January 12, 2017, 6:37 am

Hello,
all RATs sold here are compatible with latest Windows versions,
for example you can try out #, we offer a free version as well: <https://breaking-security.net/#/>

Best regards

bzr? - January 12, 2017, 6:37 am

Any paid RAT will be compatible with most versions of Windows. Some nice free RATs include Quasar and Babylon. jNet will be a free platform RAT but is not yet released.

Thank you guys. And do you know when will jNet be released?

Also are there any other free good alternatives?

Not sure when it'll be released. Your best bet for a free RAT is Quasar or Babylon imo.

That would suck actually. Can someone confirm this?

Armada - January 13, 2017, 1:39 am

So, @OP

What type of RAT would I want to use on Windows 8,10 machines Homes performance class and HOW to configure, please advise good sir.

Dude, I am not really sure what are you trying to say? ?

I asked just for the RAT names (free and paid ones) as I've got no trouble with configuring it.
